Yahoo Group Archive: HoustonScan (2012 — 2013)

Yahoo Group summary: For radio scanner enthusiasts in and around the Houston, Texas area.

These Yahoo Groups messages were archived in WARC format by ArchiveTeam in 2016. This PDF was generated by Digital Library of Amateur Radio & Communications from the WARC files in 2026.

Date span: 2012-01-01 through 2013-12-31

Source WARC: houstonscan.UjMHkem.warc.gz

Source item: https://archive.org/details/yahoo-groups-2016-06-17T19-53-03Z-ecb91a

Messages included in this PDF: 4454

Message records with no body available in the source archive: 2

Messages omitted as spam from this PDF: 1389

Yahoo replaced the domain portions of email addresses with @... in the archived messages. Characters lost in Yahoo's archived text appear as ?.

Messages are presented in ascending Yahoo message-ID order. Gaps indicate records absent from the source WARC or messages omitted from this PDF as spam.

You know, you're discriminating against the no-code techs on the group, and that just will not be tolerated.
Starting on January 1, 2012, all correspondence on this group must be made using the modern English Alphabet (letters A-Z), and the Arabic numeral (0-9).
Other symbols may be used for punctuation or emphasis but not as a substitution for the English Alphabet (except to denote expletives).
At times, the Roman numeral system can be allowed in place of Arabic numerals (if you can demonstrate that you know how to do so correctly).

If these rules are not followed, vengeance will be mine, sayeth the moderator.

Oh yeah, how about them Aggies? WHOOP!

24283. WLS-FM

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-01-02 07:47:15 UTC
From: Chris Boone
Topic: 24283 Message: 24283

Heard on WLS-FM (94.7) Chicago this morning from John Landeckers (Records truly IS his middle name...really!):

"And a shout out to my friend Chris Boone in Groves, Texas listening on a Smart Phone; found a smart use for them!!!...AWESOME!!"

WLS used to be an ABC station..now owned by Cumulus who owns 94.1, 102.5, etc in Beaumont and 103.7/104.1, etc in Houston...and is the second largest broadcaster behind Clear Channel....(another ex employer!)...

Now when the #1 DJ in Top40 history mentions your name AND your home town on the #1 music station in Chicago, you KNOW 2012 is gonna be a good year!!! Wasn't the original Big890 WLS AM but it was the "MusicRadio" WLS callsign...YES!!! Thank you John (his facebook page "John Landecker" also has it posted on his wall!)

www.947wls.com is the web site for their stream.....

What a way to start 2012, huh???!!!

In the 90s you could buy a replacement wing for $1500. The leak is probably a bent fuel line. Lift struts seldom break so you can get them for almost free. Lots of labor to transfer cables, fuel tank, flap and flap motor, aileron, and nav light. The second biggest expense would be painting the wing to match.

I wish I still had my C64. Since I was born in 78, it was my first computer and the only 'game system' that I have ever owned. When I went to Space Camp in Huntsville, AL in 1990 I was amazed that they were using Commodore 64's to run their shuttle simulators. Ahhh, childhood memories.....

24325. problem in rr with montgomery edacs

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-01-04 18:13:24 UTC
From: WILLIAM D.
Topic: 24325 Message: 24325

unless i am wrong..could someone explain to me why on radio reference
under Montgomery county's edacs system there are 2 frequencies that are duplicated?.
lcn #10 is the same as lcn #13 and lcn 11 is the same as lcn 15.
is this a mistake???
why have 2 frequencies the same on a edacs system..

24326. Re: [HoustonScan] problem in rr with montgomery edacs

The duplicates aren't being used anymore, you can actually leave out
both entries of them.

It will mess up a scanner, and need to be in there so it doesn't mess up the logical channel list.

I vote for only needing LCN 1-6 and 8, anything else is unnecessary.

Let's see what others say :-\

Only putting in 1-6 and 8 are fine as long as your scanner will let you leave 7 blank. If it doesn't then you'll need to put in 7.

That's how mine is programmed. Tracks fine when I'm up there.
Only agencies you really need it for anymore are Conroe PD and MCHD EMS enroute. Everything else is on the P25 trunk or VHF-hi.

Only use 1-6 and 8, the other will never be assigned so 000.0000 is fine.

From: Marvin Suggs
Topic: 23096 Message: 24347

Whats with all the feedback/crosstalk on the Richmond site? All the SO/EMS/FD talk groups have been experiencing terrible interference. Seems like it could be a dangerous situation.

And what's with the problems with the Fort Bend EMS CAD system? Seems like almost half the calls are dispatched to the wrong ambulance. Sugar Land calls are sent to the Richmond unit and vice versa. It takes a minute of two for dispatch to re-send the call to the correct unit, surely this is a dangerous situation as well. Even some Houston and Pearland calls are being routed to Fort Bend.

Thanks,
Marvin

Issues with the central sites also, seems like an atmospheric issue.

it's been going on since the rebanding of the Richmond site. you can hear other agencies bleeding over on the talk groups.

That's why I gave up free e-mail and bought a domain and hosting. Even
Gmail isn't safe.
My deal through GoDaddy cost me $30 for a year so it's not like it's a
big payout either, and there are even better deals out there.

Josh;

How many spam messages do you get in a day?

Before gmail (and later yahoo mail), I would get 200 spam per day. If you host your own email server, you get the chore of managing spam filters, whitelists, blacklists, and the like.

As for Godaddy, some folks have moved away from them because of their support for the proposed SOPA legislation (that's another story).

On the topic of hosting companies, HostGator is a Houston and Austin based company that has an anti-SOPA stance. I've had good service from them.

From: Kevin Chessher
Topic: 24371 Message: 24371

If you aren't listening to the Reliant TRS and if you are in range of it, it's worth bringing it up.

Lots of fights, numerous "invalid" tickets with the ticket holder very unhappy due to paying $$$$, seats falling apart and all sorts of interesting stuff.

The only thing that's really more than usual is the ticket issue...go figure.

And they don't have a bad TTA causing its own interference ;-)

I have always found listening to fast food drive-thrus to be the radio equivalent of peopleofwalmart.com. Holy crap, the abuse those people take.

Yeh, and it's a real shame, beautiful building MDA could of renovated, but just like the Shamrock Hotel they will turn it into a parking lot indefinitely. MDA is about the big bucks, unfortunately not much of ANYTHING else.

From: Chris Boone
Topic: 24377 Message: 24393

No way I would do that on my SUV or car....now on a pickup it might not be bad...sure beats having multiple antennas....(as a ham, I am putting a KG 2/70, a KG-220 and a NMO150 for 6m, and MAYBE a NMO on 10m, on the new Escape....now if I can find room for the gear!!)

Believe me, it's the ones with the YAGIs on the vehicle that make me shake my head....

Funny how they miss 220 in the xmit side...yet a discone has a 13:1 freq range so if it will cover 2 and UHF, it SHOULD cover 220....

I would imagine Harris County RRC techs did as it has been gone for over 24 hours.

This had actually been happening for a long time. I have a recording of it from March of last year.

Subject: Re: [HoustonScan] crosstalk/ feedback

I would imagine Harris County RRC techs did as it has been gone for over 24 hours.

This had actually been happening for a long time. I have a recording of it from March of last year.

On 1/7/2012 9:08 PM, Marvin Suggs wrote:

Over 24 hours and not one instance of this. Good work RRC!

On 1/5/2012 9:29 PM, Marvin Suggs wrote:

Whats with all the feedback/crosstalk on the Richmond site? All the SO/EMS/FD talk groups have been experiencing terrible interference. Seems like it could be a dangerous situation.

And what's with the problems with the Fort Bend EMS CAD system? Seems like almost half the calls are dispatched to the wrong ambulance. Sugar Land calls are sent to the Richmond unit and vice versa. It takes a minute of two for dispatch to re-send the call to the correct unit, surely this is a dangerous situation as well. Even some Houston and Pearland calls are being routed to Fort Bend.

Thanks,
Marvin

I know that's district/dispatch 4 north of I-10, I'm not sure if it's still 4 on the south side of 10 or not (I didn't get that far back in my key map with labels).

I believe that's tg 9008.

24433. PSR-500,PRO-197, PRO-106 Problem after rebanding

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-01-08 17:16:39 UTC
From: James Luhn
Topic: 24433 Message: 24433
Attachments: 1 described; binary payloads are missing from this source WARC

I have noticed a problem with my PSR-500, PRO-197, and PRO-106 after I updated the firmware and tables for the rebanded frequencies. Perhaps someone can solve my problem. Occasionally (actually rarely) the activity indicator light will be illuminate and the scanner stops scanning but I do not receive any of the audio of the transmission. I have a PRO-164 that I updated and it works fine receiving the missed audio transmission on the PSR-500, PRO-197, and PRO-106. This problem occurs maybe once per 50 transmissions. I have lowered the endtone threshold to 80 with no effects noticed. I have observed that this problem seems to occur more often when a transmission ends and another on the same talk group responds. Since the activity light stays on perhaps the talk group is decoded but the scanner gets confused on what frequency to go to. I have double and triple checked my table entries that I got from Radio Reference. This is the table I have entered.

Any suggestions?
Thanks,
-james

The National Weather Service has confirmed a tornado touched down at
Mall of the Mainland in Texas City.
They are evacuating the mall to assess the damage.

I dodged a bullet (as the weather guys would say). The picture they are currently using for the linked story is right down the road from me. We went down there to take a peek and numerous houses have severe damage. Doesn't look like straight line winds to me, you can see the path...and the 2x4's stuck in roofs and sides of houses.

24481. new update for the HP-1 scanner

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-01-10 16:50:49 UTC
From: SandyJ
Topic: 24481 Message: 24481

there is a new update avaible for the HP-1 scanner -- off the sentinal site

plug in the scanner to the computer and then bring up the sentinal icon

go to semtinal firmware upgrade area and then follow instructions for

the set up.

this set up corrects frquency errors down loads and other bugs.

as wel as updating your local as well as your national frequency

listings. from the RR site .

the instructions are easy to follow / and at the end it automatically

reboots your scanner and goes back to regular scanning.

Taint right --- Taint wrong --- it jest is

The question I have is the TxWARN P25 in the new database. Based on what I suspect, it won't be, so any updating of the HP-1 or the HP-1 database since the system was flagged as Phase II will cause you not to have it in the radio.

24483. Electric Smart Meters

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-01-10 18:11:28 UTC
From: Lou
Topic: 24483 Message: 24483

I know this was a discussion a while back, but since some contractor just came a little while ago and switched out my meter, I thought I would bring it up again. He knocked on the door and let me know they would be doing it in a couple of minutes which would cause me to loose power for a a few seconds (about 2 when it happened). Lots of notification, huh? (not)

I haven't yet seen any impact on scanners or my wifi but I've only had the meter for 30 minutes or so.

Go register your meter at https://www.smartmetertexas.com/CAP/public/ You can see your power usage at 15 minute intervals.

I believe you are correct, part of the update was to correct systems
labeled as X2-TDMA and TxWARN is labeled as Phase II TDMA so it still
won't load.

24492. New to me P25 TGs

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-01-11 01:00:02 UTC
From: Mushman
Topic: 24492 Message: 24492

Unitrunker has been running on the TxWARN P25 system for a couple of weeks and I see six TGs with no label. Also, these are not in the RRDB. A close personal friend showed me a math formula to convert P25 TGs to analog TGs. Myles list has some of these as confirmed and highlighted in blue.

P25 TG 939 x 16 = 15024 Harris County DA Disp 1 Confirmed
947 15152 Harris County DA 6 Chief
951 15216 Metro PD Tac-1
953 15248 Metro PD Tac-2 Confirmed
959 15344 Metro PD Spec Events
961 15376 Metro Transtar Confirmed

If these are listed elsewhere I apologize. Just trying to fill in the blanks.

Oh, the chase began in Bellaire as a home burglary, the person whose home that was burglarized was caught in the traffic on the outbound lanes, stolen was a home safe that was recovered in the trunk of the burned out car (Per www.KHOU.com 10 p.m. news).

I would imagine Harris County RRC techs did as it has been gone for over 24 hours.

This had actually been happening for a long time. I have a recording of it from March of last year.

Over 24 hours and not one instance of this. Good work RRC!

On 1/5/2012 9:29 PM, Marvin Suggs wrote:

Whats with all the feedback/crosstalk on the Richmond site? All the SO/EMS/FD talk groups have been experiencing terrible interference. Seems like it could be a dangerous situation.

And what's with the problems with the Fort Bend EMS CAD system? Seems like almost half the calls are dispatched to the wrong ambulance. Sugar Land calls are sent to the Richmond unit and vice versa. It takes a minute of two for dispatch to re-send the call to the correct unit, surely this is a dangerous situation as well. Even some Houston and Pearland calls are being routed to Fort Bend.

Thanks,
Marvin

Yes that was a different agency coming through and I'm pretty sure I
know exactly what was causing it.

Just found out that MS Outlook Express does not work with 7 or Vista. Guess who is looking for a new email program?
I have access to the complete Office 2007 Suite which includes Outlook. Outlook has more features than Express and is probably more like it than anything else.
I'm sure I can't import mailboxes into Outlook from Express. That would be too easy. Like I said, growing pains...

Same here, use Mozilla Thunderbird & one can write filters similar to
the old Eudora to save files off the In box for reference..

Howard Bingham
KE5APJ

P.S.: Thought this group was about scanning, hot does talk about
computers qualify for discussion..?

Outlook can import them from OE depending on your version of Outlook

Google and there are plenty of help pages (did it myself) last spring

Sent from my Motorola Smartphone with Sprint Direct Connect on the Now Network from Sprint!

I'm still confused. I have a BCD396XT. I put in the rebanded frequencies from Radioreference.com. However, do I now need to put anything into the band plan under each site? If so, what do I put in?

I know this has been discussed a lot but I'm not that smart I guess.

Sorry...Yerry.

24540. Re: crosstalk/ feedback

I've been having a bit of a problem monitoring the Mo City site. During the day, and later at night I can monitor Ft. Bend County area agencies and Brazoria County/Pearland with few problems on my Pro-106. But, during the late afternoon, with control channel 860.9625 in charge, talkgroup 23952, Brazoria County SO 1, begins having EDACS beeps, bus conversations, and the voice channel display is 853.1625, which is a HISD West Houston frequency.

Is this an anomoly with the Mo City site, or my scanner?

24541. Re: [HoustonScan] Rebanded question...sorry.

Choose custom bandplan and use the below entries...

Lower Freg Upper Freq Step Offset
851.02500 854.00000 25KHz 440
851.01250 868.98750 25Khx 0

Your scanner is going to voice frequency 853.1625 as part of the Mo City site? 853.175 is part of the Mo City site and is only 12.5 KHz away and will cause issues for scanners when it assigned and the HISD frequency are both keyed.

24552. 740 KTRH Bleeding On All Police & Fire Channels Is Really Annoying

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-01-13 02:35:32 UTC
From: briand
Topic: 24552 Message: 24552

740 KTRH is bleeing on all police and fire channels every 15 to 30 min this has gotten really bad the last 4 days. Someone plz let them know

24553. RE: [HoustonScan] 740 KTRH Bleeding On All Police & Fire Channels Is Really Annoying

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-01-13 02:38:53 UTC
From: Kevin Chessher
Topic: 24552 Message: 24553

What you are probably hearing is 450.350 getting into your scanner.

24555. Re: 740 KTRH Bleeding On All Police & Fire Channels Is Really Annoying

From: bpckty1
Topic: 23096 Message: 24559

I was wondering about that. So, I guess I'll have to give up on monitoring the Mo City site during bus run times since this "anomoly" is built into the scanner (beep, beep, beep).
:^p

--- In HoustonScan@yahoogroups.com, Kevin Chessher <kchessher@...> wrote:
>
> Your scanner is going to voice frequency 853.1625 as part of the Mo City site? 853.175 is part of the Mo City site and is only 12.5 KHz away and will cause issues for scanners when it assigned and the HISD frequency are both keyed.

> On 1/12/2012 5:04 PM, bpckty1 wrote:
> >
> > I've been having a bit of a problem monitoring the Mo City site. During the day, and later at night I can monitor Ft. Bend County area agencies and Brazoria County/Pearland with few problems on my Pro-106. But, during the late afternoon, with control channel 860.9625 in charge, talkgroup 23952, Brazoria County SO 1, begins having EDACS beeps, bus conversations, and the voice channel display is 853.1625, which is a HISD West Houston frequency.

Is this an anomoly with the Mo City site, or my scanner?

24560. RE: [HoustonScan] Re: crosstalk/ feedback

And I'd be willing to bet you had this issue when both HC and HISD were still on the 868 frequencies.

From: Myles Barkman
Topic: 23096 Message: 24561

If it's actually going there when using the Mo City control channel, all I can think of is that the bandplan wasn't entered exactly as listed.

>Choose custom bandplan and use the below entries...

>Lower Freg Upper Freq Step Offset
>851.02500 854.00000 25KHz 440
>851.01250 868.98750 25Khx 0

Make sure that first frequency is entered as 851.025 and not 851.0125 (on the first line). Don't really know if that is what would cause the undesired behavior.

Your scanner is going to voice frequency 853.1625 as part of the Mo City site? 853.175 is part of the Mo City site and is only 12.5 KHz away and will cause issues for scanners when it assigned and the HISD frequency are both keyed.

On 1/12/2012 5:04 PM, bpckty1 wrote:

My guess is KTRH transmission equipment is at the same location as the HFD & HPD radios are located & City of Houston technicians have been slow to correct drifting radio equipment, as I remember 1 weekend a bunch of years back, where HFD calls were bleeding into the UHF ham repeater for Salt Grass Link System & they had to remotely turn off the Salt Grass Link repeater until the city corrected the problems..

Agreed, but they could easily have a remote studio to transmitter link downtown, as do several TV stations for mobile to helicopter relays to their studios or the transmission site..

Or it could be his dual-conversion scanner. I'm not saying it isn't possible, but you'd think more than one person would have noticed this if it was happening outside of his radio.

But I could be wrong.

I won't recommend any one unit as someone will probably shoot down my suggestion anyway.

With that being said, do you want to hear the P25 stuff (DPS, MSCO, Wharton, Metro, etc)? Most agencies on the TxWARN system will probably be transitioning to P25, so that's something to keep in mind.

By the 450 trunked system I assume you mean the LTR stuff, if so then the answer is yes.

Solid performing digital trunked mobile units would be...

Uniden BCD-996XT
GRE PSR-600
RS PRO-197

Non-digital trunked would be...

Uniden BC-15XT
GRE PSR-410

Another possible choice would be the Uniden HP-1, a location-based scanner that has the complete Radio Reference database loaded on it. I have never personally seen/used one, so I don't know how "mobile" they are. Several members on the list have these so maybe they'll chime in.

I'm not sure if HISD is self-maintained or not. I guess Bliss is long
gone and that's who used to take care of their stuff.

Person trapped under train...

http://www.click2houston.com/news/Person-trapped-under-METRORail/-/1735978/8005072/-/d8wn5p/-/index.html

Quote from the story...

"The man was trapped at Main and Polk sometime after 7:30 p.m. Friday."

That's pretty awesome, seeing how it isn't even 7:30 yet. I heard the original call, driver said person was half in the street and half under the train.

~Pretty funny :lol:

I'm going to go out on a limb here and guess that one person was using a 24 hour clock and the person setting the story was clueless so just removed the "1'. 17:05 & 18:20 makes a lot more sense then what is in the story.

Hearing 442.000 pl 103.5 used but haven't listened long enough to determine usage.
Also 444.250 pl 88.5

Have not heard 444.025.

Kevin, is that a Repeater? or Simplex.

I don't even recall any possible Grand-Fathers on the GMRS Splinters, only the Actual Repeater pairs and No Modifications to the license could ever occur.

These were mostly the old KA?-#### series call signs only.

The Splinters were always simplex never paired [Legally] :)

With the demise of Metro Traffic is there really any radio-based traffic reporting group left out there? I know there was Total Traffic for a while but they were *ahem* somewhat unprofessional in their methodology.

I was within a quarter mile of this school lockdown.

http://abclocal.go.com/ktrk/story?section=news/local&id=8509820

I heard the pilots talking to each other on AM and the UHF conversation of the other news station but never heard the VHF conversation. I was guessing same as William that maybe the helicopter voice was included in the video he was sending.

Got a couple of troopers pulling lots of folks over here at Fairbanks N Houston and Hempstead Rd.
First I thought they were getting them for driving through the train signals since I saw a news quip about them doing that. And I saw a couple of engines on the line go through the signal a couple of times. I thought maybe DPS and the RR were working together to catch offenders. I don't think that is really what is going on now but it would have made a great story.
I was about to take video.

Not sure what they are pulling folks over for but you better make sure you got your stuff together if you come through this area!

Sounds like the road channel along this line is 161.445 but I haven't heard any traffic on there related to the troopers.
If they were talking to one another, I don't know what channels they might have in common. Perhaps the RR would let the troopers borrow an HT. Don't think RR would have any kind of interop channels that are shared with DPS.

Unless UPRR Police were present I doubt the train crew was in on it. One, a train crew doesn't come cheap, and two, there are industries along that part of the line that get switched fairly regularly.

With the exception of Amtrak PD in the Northeast, railroad police in the US are almost never "dispatched" in the traditional sense. They will usually hang out at the yard office (Englewood and Settegast for UP, New South Yard for BNSF, and North Yard for PTRA locally) until a report of a trespasser comes in, or they will run undirected patrol. Locally the patrol vehicles are equipped with MDTs (which were on the County network but have probably since switched to air cards,) VHF Kenwood radios which usually stay on the local yard or road channel, and 800 XTL radios. The 800 radios have access to (at least) Fort Bend, Harris, and Brazoria SO dispatch channels in addition to each road's back channels. While UPRR Police have been reported on DPS VHF P25 channels in other parts of the state, word on the street locally is that they only have access to TX LAW 1-3 on the VHF side.

In case it isn't on Myles' list, the line that parallels US 290 is the UP Eureka Subdivison (former SP Hearne Sub) and uses 161.445 (89/89) from Eureka Jct. to Hearne.

I was telling the guys here that would be a pretty expensive "bait train" using up all that diesel to catch violators.

I guess this is typical train movement. I had never really paid that much attention to them before. But when we saw all the DPS activity and I knew about the safety campaign, it all looked like some type of coordinated operation.

Not catching any kind of communication between DPS and trains. Would be cool though.

From: Howard Bingham
Topic: 24630 Message: 24645

Generally when the railroads do an OLI sting, there are officers with HT's on the train which is also catching the violations with CCTV recorders built in on most main-line locomotives.

The sting's would be on police channels, if not also on railroad Special Agents frequency which is a "mutual aid" frequency among the law enforcement community.

In Texas, railroad "Special Agents" carry the same certification and authority as sheriff's dept. officers..

Well, egg all over my face.. according to Ch. 13 it was coordinated with Union Pacific and they did send a crewed locomotive out to run up and down the line to trigger the crossing gates. Crazy. I guess it wouldn't count as a violation unless the track was actually occupied. More interesting still was the interviewed UP special agent stating that they were charging violators with trespassing instead of a traffic violation.

I don't have an analyzer, but given you may have Comcast service, it very well could come from the distribution point of your Comcast connection..

I don't have the Comcast service, but there is a distribution box for Comcast cable about 25 ft. from my front door & there are high pitched harmonics coming from the box on 28.440 of the 10 meter band which are also likely at various other ham and repeater bands..

This was a topic of discussion on the Houston S.H.O.T. net at 28.488 on Tuesday night, and was present on radios of other ham participants which were using old "fox hunt" techniques to locate the source of the digital harmonics which have been found in a number of locations in Houston on several frequencies & in each case the source was pin-pointed to near Comcast distribution boxes usually found on utility poles in residential areas, but may be located at numerous locations in large apartment complexes.

Maybe they're going to try what they wanted to do when HC first went trunking, $5000 for a radio and $500 per year "access fee", for RX only.

Someone probably realized how much the local shops are making on scanners.

Ok, if you don't need P25 I would personally go for something current
and that doesn't require a RIB.

what would you suggest.
i thought it was a good deal due to the channel capacity and price.
and there working on getting some apco 25 amateur repeaters as their in their infancy like dstar so i thought it would work good.

That's kinda funny. Wonder if that's what was happening in San Antonio around this time. Rumor was too many rogue radios on their Moto system so they went EDACS.

On Jan 20, 2012, at 1:08 PM, Kevin Chessher <kchessher@comcast.net> wrote:

> Which was what the original intent was back in 1991, until some little unknown local shop figured out how convert Type 2 tg's to Type 1 and sold thousands of Standard radios...for a lot less that $5000.

SA actually had Standards on their system for non-mission critical users.

The GRN moved from an 800 MHz Omnilink system to a VHF P25 system so there are likely lots of these.

Shouldn't be as bad as last time, but...

A VIGOROUS STORM SYSTEM WILL APPROACH SOUTHEAST TEXAS ON TUESDAY
NIGHT AND WEDNESDAY. STRONG INSTABILITY...ABUNDANT MOISTURE AND
FAVORABLE UPPER LEVEL WINDS WILL COMBINE TO GIVE THE AREA A GOOD
CHANCE OF SHOWERS AND THUNDERSTORMS. DUE TO THE AVAILABLE
INSTABILITY...A FEW OF THE STORMS COULD PRODUCE STRONG WINDS.
RAINFALL AMOUNTS WILL AVERAGE BETWEEN ONE AND TWO INCHES WITH SOME
LOCALLY HIGHER AMOUNTS.

.SPOTTER INFORMATION STATEMENT...

SPOTTER ACTIVATION WILL NOT BE REQUIRED.

That's a good price for that radio. I know people who have dealt with that guy and while he himself is an idiot and knows nothing about what he's selling they do work as advertised. They are also 100% identical to US radios, only the tags carry CE certs instead of FCC (and no, that doesn't make them illegal to own or use in the US.)

FYI, the GRN system was originally UHF-Low Smartzone Omnilink and is now UHF-Low Astro25. Fire/EMS and government agencies use it but NSW Police still maintain their own UHF-Hi conventional system.

That's a good price for that radio. I know people who have dealt with that guy and while he himself is an idiot and knows nothing about what he's selling they do work as advertised. They are also 100% identical to US radios, only the tags carry CE certs instead of FCC (and no, that doesn't make them illegal to own or use in the US.)

FYI, the GRN system was originally UHF-Low Smartzone Omnilink and is now UHF-Low Astro25. Fire/EMS and government agencies use it but NSW Police still maintain their own UHF-Hi conventional system.

24693. Christi Myers

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-01-21 01:00:24 UTC
From: Mushman
Topic: 24693 Message: 24693

Christi Myers just did a little thing on ABC Channel 13 about Life Flight. Story about how blood is being transported and used during the flights. Hopefully there will be a link to video on http://abclocal.go.com/ktrk/index a little later. Dr. Duke was shown speaking in the dispatch area. Also some onboard flight views.

24694. Band Scope

I rediscovered a cool feature on the latest Uniden scanners (BCD3/996XT, BC346XT and BC15X). It's sort of a poor man's spectrum analyzer.

Sent: Friday, January 20, 2012 7:16 PM
Subject: [HoustonScan] FW: BBB important information

OK, which one of you complained? I'll find out sooner or later so you better not make it any worse on yourself.
Don't make me send my goon squad to get you!

From:HoustonScan-owner@yahoogroups.com [mailto:HoustonScan-owner@yahoogroups.com] On Behalf Of Better Business Bureau
Sent: Thursday, January 19, 2012 7:25 AM

Subject: BBB important information

Attention: Owner/Manager
Here with the Better Business Bureau would like to inform you that we have received a complaint (ID 31252690) from one of your customers in regard to their dealership with you. Please open the COMPLAINT REPORT below to view more information on this problem and let us know of your point of view as soon as possible.
We are looking forward to hearing from you.
Regards,
Rebecca Wilcox

OK, granted, it's old firmware but it does support P25.. actually, the
very first revision to support P25. No AGC but if 90% of your usage is
going to be wideband analog it won't matter anyway. You'd probably want
to do a full alignment before putting one on the air though, since it
probably hasn't seen a service monitor since Clinton was in the White House.

24752. Re: [HoustonScan] Fw: [moderatorcentral] delayed messages

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-01-21 22:27:37 UTC
From: Howard Bingham
Topic: 21434 Message: 24752

Earthlink not bad either, their ADSL is through your local phone provider, digital connections available, the ARRL uses Earthlink for their blind mailboxes to your regular e-mail account.

Locally in Houston, Hal-Pc.org is cheap, only $ 12.00 for dial-up connection (With spam and virus filtering), or they can arrange ADSL through ATT at an attractive rate.

I use Earthlink ADSL, their fee includes the DSL connection with your local provider, their tech support is second to none & offer 24/7 service by either phone of by on-line chat services. They also offer ARRP discounts for ARRP members..

Need I say more ?

http://timeoutchicago.com/arts-culture/chicago-media-blog/15094433/solid-gold-landecker-lands-night-shift-on-wls-fm

Will he do the famous "Boogie Check"?????
NOW if they could just get Jeff Davis to do full time and somehow Larry Lujack back on mornings (but that wont happen)!
And Records is truly his middle name

That was a interesting pattern. Usually they fly south over the Gulf, turn around and head back north. I didn't catch anything on 311.0 or 323.8 from them today.

If you're still convinced the Centerpoint meter is the source of your problems why don't you contact them? Smart meters are a hot topic right now so I'm sure they'd want to prove it isn't them. I know one of the leads on this project and he's pretty sharp so you should get good results.

Someone listened, DPS Pierce has 155.535 patched to TG 4049. So you hear
the 800 mobiles on VHF and the VHF mobiles on 800.

From: Kevin Chessher
Topic: 24780 Message: 24780
Attachments: 1 described; binary payloads are missing from this source WARC

Another post piqued mine interest in how the spectrum looked from my antenna (R/S 20-176). This is without any of my filtering and shows why I need such filtering.

One thing of interest is the LTE carriers in the 700 range, now scanners get hit from both sides. A simple bandpass filter sure would help that, of course you would lose everything else...but that's what multiple radios are for.

Here is what Bill was trying to send. And I believe this would pretty
much filter out everything except 7/800 MHz stuff.

Another post piqued mine interest in how the spectrum looked from my antenna (R/S 20-176). This is without any of my filtering and shows why I need such filtering.

One thing of interest is the LTE carriers in the 700 range, now scanners get hit from both sides. A simple bandpass filter sure would help that, of course you would lose everything else...but that's what multiple radios are for.

From: Josh W.
Topic: 24780 Message: 24800

The problem isn't getting a filter to do what we want, it's getting one small enough to be viable for a mobile installation.. and keeping it priced in the typical hobbyist's budget range. On a lark I looked into it once with some of the commercial site hardware manufacturers and was given quotes in the $3,000-5,000 range for a single set of filters.

Of course, this would all be a moot point if the scanner manufacturers would just build mono-band 700/800 radios with commercial-grade receiver front ends and aggressive preselectors.. grumble grumble

well....nope.
2 guys start ragchewing when one guy admitted their was a net on..didnt even bother asking the net for permission..then it turned into a 3 way ragchew...and someone did step in and inform them that there was a net on...in the most pc way possible..made me sick...
and why would the wx center want to know if its raining at someones house...NO ONE CARES...
Now if you see a tornado...now thats info....
Never had this issue with the wx nets in boston...it was so damn professional..we had vehicles and radios just given to us becuse of our professionalism...
They might as well take all the ham bands away.....we dont use them we abuse them...

I haven't been on saltgrass in a while, and when I listened to it, I called it channel 19. I'm guessing some things don't change by the sounds of it.

There is the reason I no longer visit 'the 92 zoo'. Kinda reminds me of Ike:
Random ham: Wow, the wind sure is blowing hard!
WX5HG: Well, that is generally a result of a hurricane hitting. This is WX5HG....
then basically hit him over the head with the fact that it was a wx net. I loved it.

OMG theresa..we got to meet for lunch or something...cause im still laughing..
and yes..it was circus d'olie out there...They should have kept the damn thing shut off..
I bet we looked like real wieners at the weather station..
My issue is...all the hard work someone did to get us into the wx station and they have to screw it up...
Its a shame....and the fact that the guy that started to ragchew...knew and admitted there was a net on...
WHAT A TOTAL RETARD...

For whatever it's worth, one of the Salt Grass Link owners is one of the local "FCC Field Agent" volunteers over seeing ham radio complaints, one can bet that attempts to rag chew during a "Storm watch" net can get one an FCC field complaint in the mail & one can toss their license in the trash if they think they can get away not answering the complaint in the prescribed manner..

Etiquette is the answer & failure to follow the rules has the consequences of loss of one's ham license or other sanctions which could result in an appearance before a federal judge..

Just my thin opinion on those who fail to follow the rules.. One repeater owner outside Houston has pulled the plug on his repeaters when some wise acre spouted off & failed repeated efforts by fellow hams to abide by the rules..

It's all over the FM part of the band. I've mainly retreated down to 2m sideband if I'm going to get on the air with VHF. Even the call frequency(146.520) rag chewers sit there and argue with each other.

Maybe I should try out 222, the cost of entry might be a good idiot filter.

Exactly my opinion too..!

I monitor Salt Grass on UHF & use VHF for other ham repeaters or to scan railroad frequencies with, seems my dual band ham rig is more sensitive than purpose bought Uniden scanners, but does scan at a slightly slower speed, so it doesn't drop long winded railroad dispatchers... :-)

An old Radio Shack Pro-44 hand held is used in my living room to monitor railroad frequencies & a Uniden BC895XLT is used in bedroom to monitor public service frequencies & the weather service.. All on separate multi band antennas..

well...it seems im not the only one that feels this way..just the only one that recently opened my mouth about it.
so mabey we should do something about it
i have been involved in regular and disaster ops in boston, colorado and south dakota and have never ran into this issue that pissed me off so bad that i had to say something until i got here.
i feel like i could offer so much but why the hell would i want to in this system.
when i was working with the red cross in massachusetts, i got 220 uhf mobiles and portables with all the trimmings from the local police department just for asking and doing some leg work.
we now have a 5 state communications system.
i also had offers to be given 2 box ambulances but turned them down...
im always wanting to do more...but when i see where it would go..im not to enthused.
sorry all..not looking for a pat on the back or anything...just upset about it.
anyone think that I am full of it...just google my old callsign

It's all over the FM part of the band. I've mainly retreated down to 2m sideband if I'm going to get on the air with VHF. Even the call frequency(146.520) rag chewers sit there and argue with each other.

Maybe I should try out 222, the cost of entry might be a good idiot filter.

Subject: Re: [HoustonScan] severe wx net on the saltgrass link

well...it seems im not the only one that feels this way..just the only one that recently opened my mouth about it.

so mabey we should do something about it

i have been involved in regular and disaster ops in boston, colorado and south dakota and have never ran into this issue that pissed me off so bad that i had to say something until i got here.

i feel like i could offer so much but why the hell would i want to in this system.

when i was working with the red cross in massachusetts, i got 220 uhf mobiles and portables with all the trimmings from the local police department just for asking and doing some leg work.

we now have a 5 state communications system.

i also had offers to be given 2 box ambulances but turned them down...

im always wanting to do more...but when i see where it would go..im not to enthused.

sorry all..not looking for a pat on the back or anything...just upset about it.

anyone think that I am full of it...just google my old callsign

Does anyone know anything about the guys that have been talking air-to-air on the 123.xxx flight test frequencies recently? They seem to have different groups each using a different frequency and they have been flying around the area on clear weather days (only) for the last 2 weeks. They are up today on 123.425 and 123.525. I've also heard them on 123.475 on other days. Based on the chit chat it sounds like they're not from Houston. It sounds like they are flying patterns as if they are following pipelines or electric transmission lines and/or possibly doing aerial photography. They refer to 3-digit "block numbers" (a lot of them are 7xx numbers) and following "lines" of different mileage lengths. I first heard them on January 14. They may be flying around 10,000 feet and they stay up all day flying around. They may be on the Houston TRACON frequencies if anyone monitors those regularly.

Upon further monitoring, they are doing aerial photography and they seem very interested in getting completely clear pictures. They are talking about being up through Monday at least.

Still very much alive, no need for it to be rebanded. The control channels did change a few months ago but the information was updated on that page.

Not a lot of very interesting stuff on the system until stuff starts hitting the fan.

You will hear HFD rescue team on 35728 on some responses.

Sometimes you will hear training when they are at their training facility near Hobby.

There are times some special event talkgroups are heard during conventions or other events.

Disease control and prevention groups come alive when the city is doing their immunization campaigns.

Other than that, the routine stuff on the system is pretty boring.

I don't think I've heard those Houston Medical Strike Team talkgroups in quite awhile. They may be Armageddon talkgroups.

All indications point to the first phase of the City P25 system being carved out of frequencies from this system, so it would be a good idea to scan them periodically and look for new P25 control channels. Other than that, the day-to-day operations on the system as it stands are pretty irrelevant from a incident/news standpoint.

I find this interesting. They are meticulous and doing "reflights" to retake photos when they don't come out perfect the first time. They are taking photos at two different altitudes. They were up again today on 123.425 and 123.525. Be sure to look up, smile and wave when you're out and about.

It could also be the appraisal district. They do a yearly photo capture of
the entire county.

Actually HGAC does the entire region and the counties can purchase the imagery from them.

24867. FW: [dfwscan] Fed frequency

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-01-31 00:40:25 UTC
From: Myles Barkman
Topic: 24867 Message: 24867

Something to possibly watch for.

-----Original Message-----
From: dfwscan@yahoogroups.com [mailto:dfwscan@yahoogroups.com] On Behalf Of Blaine Brooks
Sent: Monday, January 30, 2012 11:06 AM
To: DFWScan
Subject: [dfwscan] Fed frequency

New digital fed frequency for me discovered this morning....

173.600 NAC156 All encrypted so far....

156.7 is PL for DEA .... wonder if they have an interagency on VHF to talk to FBI, etc.?

Although they are UHF here in DFW and still analog, except for one freq that might be digital 413.975, there has been some rumblings that they "might" transition to VHF...

Def a freq worth keeping an ear to...

Blaine

For the latest information on DFW Radio Communications see:

Interesting, a 780 shouldn't work on Clodine at all since it rebanded. And if the OP wants to hear Chambers County he will need a P25 capable scanner.

It depends on the frequencies used whether the 780 will track that site.

It can track some better than others.

If it is all .xxx5 frequencies, I believe it will work fine.

I just asked my boss who has three Uniden 780's. He says he reprogrammed his to the Clodine, and 2 other towers and they work great. Your call on the new scanner though.

From: Kevin Chessher
Topic: 11163 Message: 24873

Anyone have an idea who might be on 152.315 with two-tone and alert tones? I got a close call hit on it on F.M. 519 (probably Central Helicopter Service), it stayed in my CC group and around 45 and Airtex I started hearing the tones. No voice, only the tones.

I show Central Cab on this but don't know why they would use two-tone.

Sent from my Verizon Wireless 4G LTE Phone

From: Lou
Topic: 24828 Message: 24880

Actually that is not quite right.

Since the CCh is 853.9250 and can be entered the scanner will find it when it starts to look for the CCh. There is no LCN necessary to find the CCh; however, once locked on the CCh and the channel grants start to get processed then all channel grants in the 440 - 559 range will be sent to the wrong frequency (one presumably not entered in the scanner) but those in the 0 - 439 & 560 and up will resolve correctly.

The problem with the Clodine site is that 1/2 of the available voice frequencies fall into that 440 - 559 range of LCNs and hence will be missed by the 780. The other half will work. So, although it will appear to "work" on the Clodine site, it really isn't.

Okay, up till just now I had not put my comment (below) to the test, but I took my Pro-90 (same as a BC235XLT - earlier era than a 780) and programmed up the Clodine site (new freqs of course) and it does "work" about 1/2 the time. :lol:

Seriously, I was also listening to my 796D at the same time (also using Clodine) and it was getting the same traffic as the Pro-90, of course the opposite is not true (that is the 90 was not hearing everything the 796D was.)

By the way, they were handling a burglary in progress at the time so there was plenty of HCSO 4th Dist chatter for a bit.

I stand corrected, a 780 will work as Lou indicated. A DMA Uniden on the other hand without the updated tables will receive absolutely nothing if the control channel ends in.xxx0 (such as 853.9250). I haven't tried my 235 or 245 to see how they will act.

An older GRE-based (2055/97) will work the same as the 780 does.

I bow to the master.

OK...you guys just sent my old brain into a full meltdown mode..lol. I have the 780 and have used a Pozzilla (sp??) software to input the freqs. Just real curious...do I need to look at a new scanner or will this one work if I know how to do the inputs correctly? Also...has anyone seen the new Uniden HomePatrol? Too good to be true????
Thanks to all for helping....
scannerless in Chambers...jim

First question...

Do you want to listen to Chambers County SO?

24898. Aircraft

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-02-01 02:34:26 UTC
From: Eric C. Carlson
Topic: 24898 Message: 24898

I caught two unusual (for me) aircraft today.
"Boeing 27" on 123.55 estimating 20 minutes out and wanting to know if they have a gate to go to. I'm assuming this plane was going into Lackland AFB.
"Satan 40 Heavy" (yes, that's what it sounded like) calling Texan Ops on 288.5 requesting a radio check and advising he's to the south.

-Eric

Ok, Chambers County is digital (P25) so you will need a digital scanner.

Solid performing digital trunked mobile units would be...

Uniden BCD-996XT
GRE PSR-600
RS PRO-197 (currently on sale for $299.99)

Another possible choice would be the Uniden HP-1, a location-based
scanner that has the complete Radio Reference database loaded on it.
Several members on the list have these so maybe they'll chime in.

OK...this makes sense then. Thanks so much for the info...will look into a new unit.

Here's the short answer: the only County system sites a 780 will work correctly on are Pasadena and Wallisville. On every other site in the system it will either miss traffic or not track the site at all.

Since you're interested in Chambers County, maybe you can answer the question of where/what does Fire/EMS dispatch on now? The tone-outs on Old Primary went away years ago, and a few years back they quit dispatching on the trunk as well. My gut suspiscion is they use alphanumeric paging exclusively, but I'd like to see it confirmed.

Love my 600, though I'm having a hard time picking up Montgomery Co which is also P25. I have a feeling it's user error though.

Ok, Chambers County is digital (P25) so you will need a digital
scanner.

Solid performing digital trunked mobile units would be...

Uniden BCD-996XT
GRE PSR-600
RS PRO-197 (currently on sale for $299.99)

Another possible choice would be the Uniden HP-1, a location-based
scanner that has the complete Radio Reference database loaded on it.
Several members on the list have these so maybe they'll chime in.

It should work on Gessner and Pickens (Med Center) as well.

Smith Point = bad place to be after Ike

Anyway, whichever one you get I would suggest getting programing
software to go along with it.

Montgomery County reception issue is probably due to it being simulcast,
all scanners have issues with simulcast sites.

From: Theresa
Topic: 24828 Message: 24906

Oh...that I did not know. Prob. doesn't help that I'm not actually in Montgomery County either. I'm not far as the crow flies; my distances varies if he has to walk and carry a gas can.

Theresa Williams

Montgomery County reception issue is probably due to it being
simulcast, all scanners have issues with simulcast sites.

Only problem with the C130 idea is that a C130 is not a Heavy, its considered a Large aircraft in the air traffic world. Thus, your suspect aircraft should be KC135's, C17's, E6's, KC10's, B52's, B2's, B1's. Happy hunting!

From: Myles Barkman
Topic: 24898 Message: 24915

Ah, I did see an E3 callsign that could have been it. I didn't know what an E3 was and what is considered "heavy". I just figured an F16 would not be.

Only problem with the C130 idea is that a C130 is not a Heavy, its considered a Large aircraft in the air traffic world. Thus, your suspect aircraft should be KC135's, C17's, E6's, KC10's, B52's, B2's, B1's. Happy hunting!

The E3B Sentry, E6B TACAMO, E8 J-STARS, and EC/OC/RC/WC135's are all derivatives of the KC135 Stratotanker. The KC135 is the military derivative of the same airframe as the Boeing 707 airliner.

Date: 2012-02-01 15:46:51 UTC
From: sandyJ
Topic: 24917 Message: 24917

i have an HP1 and i live in dickinson and i do not have any problems at all

with chambers county , brazoria county, harris county, galveton county,

the only problem i have is with DPS and i was told that since it is a tdma type 2

p-25 system, that uniden has not has not written a program for it as of yet .
i do not know if that is accurate but that is what i was informed.

the fact that DPS is running a split system does not make it easier to listen to
or program with half of it 800 analogue and the other part a p-25 system.

i i understand that they use a lot of simplex as well

there has been 2 major upgrades for the HP-1 posted - but not posted was what they were
upgrading or fixing in the sentinal system.

Taint right --- Taint wrong --- it jest is

back to topic lol

the HP-1 should be able to import from sentenal now since UPMAN(Paul)
has made it to where TDMA P25 systems if i understand correctly will
pull into the software i know that TxWARN P25 now shows up again on the
software and DPS is not TDMA last i checked

Thanks

Talk about another OLD product that is still being sold today, only in more modern packaging & without contest premiums packed inside the container.

Howard Bingham, who loves old stuff

I'm no longer in possession of the below decoder, after being visited by several 3-letter agencies it (and numerous other items) are no longer in existence.

I took one for the group and exonerated everyone here, so y'all are safe.

CenterPoint just got an STA approved on February 2 to start a pilot of the new radio system using three sites. The Cypress Service Center area will be the pilot area covered by the three sites. The pilot period will last 120 days.

Pilot System optimization and alignment 10 Days
Pilot System Funtionality Acceptance Test Plan execution 10 Days
Pilot System Voice Quality Coverage Acceptance Test Plan execution 30 Days
Pilot System Mobile Data Acceptance Test Plan execution 10 Days
Pilot System Burn-in Period – heavily loaded system 60 Days

Hi, new to group so I hope I do everything right.
I have a BC 246T scanner which I recently upgraded to latest firmware and in addition updated to latest ARC246 software. I understand that there has been "rebanding" taking place and control freqs have changed, so I copied Harris County area freqs from Radio Ref and pasted them where the old control freqs were located in ARC 246. I am now receiving TXWARN agencies,except for Katy Police and Katy ISD Police. What did I do wrong?

Did you set the custom tables for rebanding? Also, what site are you trying to listen to them on?

I don't recall seeing anything about custom tables, but I am receiving HC Sheriff and Constables on trunking, so am guessing that the custom tables (wherever they are located) was reset for rebanding. Where are they? I have all Harris County area control freqs (approx 50) in the Trunk Frequencies tab in ARC 246, I don't know which site they would be on but guessing the Clodine site which is the nearest to Katy.
Thanks.

Not having ARC246 I can't tell you where to look, so we'll assume it's correct. If you download FreeScan (it's free!) you can shot me your file and I can take a look at it for you.

Since you have all the control channels programmed in you have no way of telling which site your radio is using, this model will lock onto the first site it sees and stay on it until it can no longer hear it. Like you said, they are probably on the Clodine site and if your radio isn't locked onto Clodine you probably won't hear them.

As a test why don't you just put in the Clodine control channel and see if you hear them. This is all assuming you are within range of this site.

I caught a brief transmission tonight on 148.125 [100.0] "base 4262"
and it sounded like it was simplex. I believe this would be on the
old channel plan unless it's an output from a new Ch. R-51 repeater.

42 prefix does tie in with TX Wing, but I looked in my notes and did not see
a 4262

http://capersqm.dnsalias.net/COMM_HANDBOOK.PDF

A/C do move from Region to Wing and back and the Tail # typically makes the
Call sign

ie": N247TX would be 42 for the Tx Wing and 47 for 4247

Wondering if a radio didn't get reprogrammed :) As there is no R-51 on any
TX Wing documents found publicly.

and the only noted/reported R-51's have been at CT and PA only so far. :(

I put 859.8625 in the scanner last night so I could check for it today.

I started hearing it around the Monroe P&R along 45 coming into work.

I got the signal full scale without antenna around the Beltway and 249.

Not picking up at the house though (32 miles away).

I don't keep up with doings on the EMS side of things, but I would guess
a console multi-select for dispatches between 155.385/453.625 and..
North Channel? Or does South Lake cover that part of the world? I know
they light up Sheldon 800, Fire 9, and Fire 6 (and formerly Atascocita
before they moved over to the Comm Center) simultaneously for box alarms
in former East Mount Houston VFD territory and points north.

24965. Houston 700 MHz STAs issued

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-02-09 03:05:40 UTC
From: Eric C. Carlson
Topic: 24965 Message: 24965

30-day STAs were issued today for testing of the City of Houston's 700 MHz public safety system:
WQOV398
WQOV401
WQOV410
WQOV411
WQOV412
WQOV413
WQOV424

Also, 3 STAs were licensed under Montgomery County for frequencies from their pool that are being used by Houston:
WQOV397
WQOV400
WQOV415

The city's request:
The City of Houston is requesting the FCC to issue a Special Temporary Authorization for the 700MHz
frequencies for our Motorola multi-site, P25 trunked system we are currently building out. The STA is
needed to be able to go on-air with the sites for the purpose of transitioning our public safety users from
their failing UHF and 800MHz radio systems. The current public safety radio system suffers from
weekly catastrophic failures creating an immediate need to transfer the users to the new radio system.
Barring any unforeseen circumstances, we anticipate being able to transition the users within one to two
months from the issuance of this STA. While we understand the licensing window to be around 90 days,
day to day failures of the legacy public safety radio systems create a pressing need for licensing and
transition for Houston’s first responders. We are requesting this STA in accordance with FCC rule
1.931, specifically paragraph iii.

Per the Region 51 RPC approval letter there are the 4 simulcast zones and 7 stand-alone sites (Plum Creek, Chase Tunnel, Mustang, Tigner, Ginger, Brazoria, Alvin).

24967. FS: Moto RMN5089B speaker mic for XTS series

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-02-09 04:12:36 UTC
From: J. Martin
Topic: 24967 Message: 24967

Listers,

For sale is a Motorola RMN5089B "Commander II" speaker mic used on an XTS5000. It is in very good condition.

This model was supposedly tweaked to reduce coiled cord loading near 400MHz... and the grille to help with wind.

Full channel (0-16), panic, . and .. button and volume controls. Earphone jack on side of mic body.

This pic is accurate--a lot of B model pics on the 'net are incorrect: http://www.123radios.com/BuyItNow.asp?PID=5550

*PRICE IS $65 shipped. *

I'll also include a generic XTS side adapter; 4-pole threaded jack and PTT button. It was used with a TCI earpiece/lapel mic.

Thanks,
josh

Another likely place is on a UHF business itinerant frequency. Although
these are supposed to be licensed, more often than not they are unlicensed.

All you gotta do now is get them their ham ticket. Just give them the test as the study guide, get them their ticket, lock those Puxings onto a 440 repeater and you can listen to them talking about turds and other entertaining things on amateur bands for years. To: HoustonScan@yahoogroups.com

I think I'll pass on telling my HPD buddies.

They were so excited to show me there new Puxing PX-888 radios they just bought for work. They got them at a steal of $160/piece. The little issue of fcc id didn't seem to bother them.

As opposed to putting them on the public safety layer for which there is no scanner made which can monitor. They are trying to avoid making people who want to monitor to have to buy an outrageously priced radio which would have to be talk transmit inhibited (and of course which would consume an id and cause affiliation issues).

From what I've read the PW layer will only be 7 sites and PS will be 40 something. Seems like they would want police on the better layer???

But I could be wrong.

I can tell you they have nothing in mind to do with the scanning public, anything they do has to do with overall logistics of trying to cover every variable involved.

I called Advanced Communications this morning asking this same question. I was told that it would be two years. But from what I understand of the FCC mandate it will be against the law to transmit on their current frequencies. So I don't know what to think.

Certainly not some spur of the moment thing going on here. This has been years in the making, much like the rebanding. Be prepared and make adjustments as needed.

4-8 weeks from issuance of STA is an insanely aggressive transition schedule. I really wouldn't worry about the UHF stuff just disappearing overnight any time soon.

My long-term prediction is that the PD patrol channels will stay patched to UHF for at least half a year, if not longer (or until the narrowband mandate shuts them down) and the HFD robot will keep a permanent UHF patch for backup or even primary station alerting like what Austin FD does (453.275/156.7 when the band's open.)

25027. RE: World Record attempt-long range balloon flight

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-02-12 04:07:44 UTC
From: cboone@earthlink.net
Topic: 25004 Message: 25027

I was unable to make the BLT28 attempt but got the following from Kirk who I advised as FAA Coordinator:

GO BLT 28!!! Make TEXAS PROUD Baby!!!

Fwd Message:

Meant to copy you on this one....I notified FAA that the balloon "might" have gone through 60,000ft at 7pm....but we had lost contact with it at 6:00pm.

The FAA notification went smoothly. I called at T-30, T-5, ... then 10 minutes later because of a launch delay....then at the point it should have passed through 60k feet. The folk at Houston Center were very nice -- I talked to 3 different folk, and they were talking to each other confirming that I had called earlier.

Anyway....it was a neat launch....stayed LOW for too long, but slowly climbed to 45k+ when we had no further packet reports. Hopefully, Florida will start reporting in the morning when it SHOULD cross land....circa 8-9am.

Kirk KK2Z

25028. RE: [HoustonScan] HPD Citywide

Yahoo group: HoustonScan (2012 — 2013)

Channel 13 has an article about a state wide roundup beginning on Feb 25th.

http://abclocal.go.com/ktrk/story?section=news/local
<http://abclocal.go.com/ktrk/story?section=news/local&id=8539681>
&id=8539681

Saturday's effort was apparently a local effort by HCSO reserves.

I'm pretty sure what DPS is doing is a directed traffic enforcement operation.

25032. BCT 8 Question

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-02-12 16:16:08 UTC
From: Marvin Suggs
Topic: 25032 Message: 25032

For radio scanner enthusiasts in and around the Houston, Texas area. PostingI recently bought 3 Uniden BCT8's and noticed the VHF-Hi Band reception is very weak. Is anyone else having this problem? And what can be done to correct it? These are 3 different installations and I know the antennas work fine with other scanners.

Thanks,
Marvin

Overload from FM broadcast or TV channels 8,11 or 13???

Do they have an attenuation feature and if so have you tried that?

And again...

MONDAY...LOCALIZED RAINFALL AMOUNTS OF 2 INCHES WILL BE POSSIBLE
THOUGH WIDESPREAD 1/2 TO 1 INCH SHOULD BE THE NORM DUE TO FAST
MOVING STORMS. SHOULD ENOUGH INSTABILITY DEVELOP...A TORNADO AND
WIND DAMAGE THREAT WILL ALSO BE POSSIBLE. THOUGH THE CHANCE OF
THIS HAPPENING IS NOT PARTICULARLY HIGH...THE SOUTHERN HALF OF
SOUTHEAST TEXAS WOULD BE MOST AT RISK AS THIS IS WHERE A WARM
FRONT WILL PROBABLY BE SITUATED.

.SPOTTER INFORMATION STATEMENT...

SPOTTER ACTIVATION MAY BE NEEDED MONDAY AND WEDNESDAY.

A good portion of Texas is getting wet. Remember the fires, remember the dying grass and trees? We wanted the rain, now we're getting it.

One of the talking head forecasters was talking last week about the La Nina event not just dissipating but becoming an El Nino event over the next 6 months. Historically speaking, El Nino would mean a greater likelihood of tropical weather in the Gulf. 2005 and 2008 were El Nino years.

The one currently on the west coast appears to have originated from the same area.

It was at 29,000 feet around Baytown. Planefinder is not showing any
planes over Houston at the moment.

I wasn't tracking it, but the signal faded to zero and I can usually
hear it hundreds of miles away at altitude.

It was at 29,000 feet around Baytown. Planefinder is not showing any
planes over Houston at the moment.

25052. Re: Katy PD and Katy ISD PD

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-02-12 23:38:23 UTC
From: g.goff@rocketmail.com
Topic: 24940 Message: 25052

Kevin, I set up a Motorola Type 2 system for Clodine only. Plugged in the primary and alternate control freqs (853.925 and 852.9625) and then plugged in the Talk Group numbers for Katy PD along with Ft Bend SO, and Sugarland PD. I have monitored the system for 30 minutes and haven't heard one transmission. I know the talk group numbers for Ft Bend SO and Sugarland PD are good as I have heard them on other System on my BC 246. The control freqs for Clodine are from the Radio Ref webssite, so am assuming they are correct. What am I missing and what should I do to correct the error of my ways? Oh, by the way, I am about 4 miles from the Clodine site, so distance shouldnt be an issue.

THANK YOU!

I guess they are as I receive other trunking agencies. When I updated firmware and software, I do not recall anything about custom tables. I am beginning to think that scanning is no longer for the recreational listener.

It should work, download FreeScan, read your radio and send me your
file. I'm sure I can get you going.

Topic: 149 Message: 25102

im wondering. did i read it correctly that on 12-31-12 is the last day that wideband can be used and they have to go to the narrowband 12.5 khz?
Also, is there any reason why the fcc isnt mandating this to the amateur radio freqs as well.
Does this affect only fm or am as well?
so this should affect all the USFS freqs and so on..correct...?
thank you for your time and ill stop trying to be funny as no one seems to care for it..Ill stay strickly to the topics at hand and be professional.

Sounds like liberty county is working a suspect described as wearing body armor, carrying an assault rifle with large drum magazine and shotgun. I hope this is some type of training, anyone else hearing any of this? I dont have the tac channel they are working in the scanner so i have only heard what has come across the P25 talk group of 2285.

From: ~Bill
Topic: 149 Message: 25114

GMRS, FRS and Amateur are not part of the Narrowbanding process.

Why ? As to Amateur, the price of the equipment and amateur is [other than those who buy radios] still an experimenters/builders hobby

The Feds began NB long long ago and the UHF [406-420] is undergoing ReBanding where

Repeaters will be 406-411 Mhz, Simplex 411-415 Mhz and inputs 415-420 Mhz [9 Mhz offset]

25121. Spray-on antenna gets great reception at Google event

you guys are always looking for some thing new

well here it is

Spray-on antenna gets great reception at Google event
February 14th, 2012 in Technology / Engineering

(PhysOrg.com) -- A spray-on antenna? The idea is not fantasy but real and tested technology that works. A Utah startup has introduced a spray-on signal booster in a can that promises an improved signal. The company suggests this is a lightweight, easy answer for smartphone users who are frustrated over dropped calls and poor cellphone reception with traditional antennas. The approach can create signal-boosting antennas on nearby walls, trees or clothes. The spray product was unveiled at Google's Solve for X "conference."

The antenna debut has been a standout at this "Solve" gathering of creative minds. In typically future-focused Google talk, the event is called a forum "to encourage and amplify technology-based moonshot thinking and teamwork."

This video is not supported by your browser at this time.

The company, Chamtech Enterprises, tested the spray on a tree, among other tests, and the team was able to send a VHF signal up to 14 miles away using only the treated tree. Rhett Spencer, chief technology officer of Chamtech, said the company's spray-on technology could make cell phones work with 10 percent better efficiency.

This is not just technology for infotainment at a show. The company's website presents the technology in the form of a "Spray On Antenna Kit" and tells interested parties to call for pricing. The company is promoting it as a multi-purpose antenna, simple and quick to assemble, mountable on almost any surface, for use in any environment. "Any" bears quite a range of possible end uses.

Chamtech has been talking to government customers but they also hope for a wider customer base including mobile phone makers and manufacturers of medical devices. Also, the company is upbeat over successful tests that were run to examine the spray's signal performance underwater. Chamtech promoters say the technology could be used by weather and oceanographic researchers and underwater welders.

The antenna spray in a can is clearly a coup for this company, which is holding several patents on its nanospray on antenna technology. That is not to say the idea of a spray-on antenna on surfaces does not have a history, which it does. According to an article in 2001, "Spray-on Antennas Make Their Mark," researchers were studying materials that could be used to spray on radio antennas onto surfaces--walls, windows or fabric shelters. Their goal was allowing military commanders and relief workers to set up communications networks quickly, in areas where there was minimal infrastructure. The Defense Advanced Research Projects Agency (DARPA), was at the time said to be considering a number of possible applications and techniques for using spray-on antennas.

Chamtech's presentation at the Google-sponsored Solve for X appears to be an impressive answer. Anthony Sutera, the company's CEO, is an entrepreneur specializing in radio, satellite and wireless communications systems. Google's bio notes say he has over 20 years' experience in creating and managing companies competing in the communications market.

I'm getting this tonight. I can receive it weakly on rare occasions. The NAC is E54. I also only see LNK or DAT. Looking at emission codes on the licenses I don't see any obvious match. I suppose it could be a utility using it for SCADA? If it's strong on the southwest side then it could be coming from the WA Parish electric power plant.

Hey guys and gals...
I have a vhf and uhf mt2000. I know there narrowband compliant however I cant get the area to highlight that would change it from 25 to 12.5.
I have heard it needs to be reflashed...heard that its the software..heard it needs to be programmned with labtools...
Can someone please help me..
I have mtsx lab and mtsx software but i have no idea how to get this issue fixed.
I read that if you use version 6.xx.xx or above it will fix this issue.
can someone lend a light in this dark tunnel

According to Motorola
<http://www.motorola.com/web/Business/_Documents/Specifications/Static%20Flies/ASTRO%2025%20Radio%20and%20Infrastructure%20Narrowbanding%20Compliance%20Guide.pdf>
as long as it is a "BN" revision it should work. Those "Lab" versions
are waaay old and may not support, but I don't know for sure (I try to
stay away from Lab versions, even though Pat Harrington is long gone :-P).

From: Kevin Chessher
Topic: 25133 Message: 25140

From what I can tell the VHF is a nogo, the UHF "should" work. I would suspect the old software being an issue, maybe you should ask on Batlabs. Or maybe Josh W. knows and will chime in.

If you shoot me a copy of your UHF file I can try it on my software version and see what happens.

If memory serves it has to be done on the newer Windows based rss, also while the radio may technically transmit a 12.5 emission, not all radios of that vintage will do the narrow steps.

Yeah, I'm pretty sure the VHF won't do 2.5 KHz steps. Does CPS support
the MT2000???

Thinking about it, they never did make Windows cps for the MT2000. My bad.
I have cps for the MTS

25151. MCHD TG 02-012/266 EMS 2

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-02-18 22:42:37 UTC
From: Aaron Siller
Topic: 25151 Message: 25151

I ran an activity log on the 16th while i was in conroe and got activity showing that this is an analog and a provice group can anyone confirm thst provoice is in use on that TG?

Hmm, sounds like a politician’s answer.

Can anyone confirm that Provoice is being used on *THAT* TG?

25165. RE: [HoustonScan] P25 TG

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-02-19 18:50:03 UTC
From: Myles Barkman
Topic: 24592 Message: 25165

I caught La Marque FD on TG 3369 through the Texas City site.

Also been hearing Texas City DPS units using TG 2021 through the Texas City site yesterday. One was talking about meeting up around the Beltway and 45. Would have thought his radio might have switched over to the Pearland site but I don't think the TG was affiliated through there. Pearland is about 6 miles from that point and Texas City is over 20.

From: HoustonScan@yahoogroups.com [mailto:HoustonScan@yahoogroups.com] On Behalf Of Josh W.
Sent: Tuesday, February 14, 2012 1:18 AM
To: HoustonScan@yahoogroups.com
Subject: Re: [HoustonScan] P25 TG

The Tomball channel was a patch to one of the Comm Center UHF channels for a medical incident.
La Marque FD and possibly Texas City FD are now being Smart-X'd between 2318 and 1A7.

On 2/13/2012 10:03 PM, Myles Barkman wrote:

Have heard activity on these lately.

3431 Texas City PD 1 DISP

3612 Tomball FD/Northwest Rural EMS City 4

4052 City of Houston radio shop 5 (possibly related to installation of new system?)

its looking like the hospitals radios for patient reports have all
switched to provoice i can confirm that 00-121/97 Conroe Regional
00-122/98 Woodlands Memoral 00-124/100 St. Lukes Woodlands and
00-125/101 Tomball Regional so far nothing on 00-123/99 Kingwood Medical
Center yet but most Likely they have as well

Thanks

From: Mushman
Topic: 24592 Message: 25188

I see and hear TG 2021 on the Pearland site. 6750 hits since 12-25. Not sure how consistent this site affiliation stuff is. That is, I'm not sure if every com thru Texas City also comes across the Pearland site or how often a handoff occurs. For example right now I'm hearing Tomball PD. Why this far south? Matagorda County is not uncommon in the mornings. Also, heard a few keyups on TG 15 the other day. I believe that is a CMOC channel.

Tonight I'm hearing them using 451.8 DCS 026 as the main channel.
461.3125 DCS 054 is being used by someone but can't confirm if it's
film related.

The control channel format will always be FDMA.

Ok so logging tdma channels make it a phase 2 and a mix if fdma and tdma is
x2?

Not necessarily, you will have to look at a raw data dump to see if the
IDEN_UP message is Motorola specific.

Aeroflex has a pretty cool document explaining the P25 control channel
functions.

I don't run UT (sorry Rick), I use Pro96Com but you would probably need to
do a raw dump yo see it. Don't worry about it, I'll check later this week.

From: Aaron Siller
Topic: 25003 Message: 25234

Ok finally got the log running on NE Simalcast from Pro96Com and i am showing the following

773.43125c
773.13125a
772.78125a
771.55625a

Neighbors are

773.96875 NW Simalcast

772.19375 this is a new one that has popped up my decode of the NE Simalcast if flaky even with the new firmware update from uniden on the 996xt guess i can try the 396xt but none the less here is the update i have so far

Thanks

oh yea also forgot 772.19375 is site 313 seems odd that the new system
is using a zone 3 instead of a zone 1 the again it is the city

Thanks

Think outside the box. Why would there be a need for any zone 3 in the area

772.19375 should be the site in Spring. Updated info is on RR here:
http://www.radioreference.com/apps/db/?sid=7209

i dont have a 800 to tell if its x-2 looked at the raw data and didn't see the IDEN channel grants are
770.50625/0
770.50625/1
771.38125/0

all on NE Simalcast tg 851 shows ENC

what i kinda see a problem with is 770.50625 is this is the Tomball CC on the TxWARN P25 system

Thanks

Aaron;

If any identifier updates have "90" in the second byte, it's a Motorola X2. Otherwise it's Phase 2. If you're running Unitrunker, you can look at the decode logs.

From: Kevin Chessher
Topic: 25003 Message: 25246

The below data dump from Pro96Com indicates X-2, as opposed to the HC system which indicates Phase 2.

CoH System...

0D 90 30 A5 80 64 09 15 75 62 C5 AA 02/24 19:42:27 TDMA (Motorola) Identifier Update - ID: 03 Base: 762.00625 Spacing: 0.01250 Bandwidth: 0.01250 TX Offset: 30.00000 Slots: 2

Harris County System...

33 00 33 A5 80 64 09 15 75 62 75 FC 02/24 19:41:11 TDMA Identifier Update - ID: 03 Base: 762.00625 Spacing: 0.01250 Bandwidth: 0.01250 TX Offset: 30.00000 Slots: 2

So if you have a PSR-800 (and could decrypt) you could hear what's happening

And here's a list of the "Manufacturer ID's", it may be dated...

$10 / Relm/BK Radio
$20 / Cycomm
$28 / Efratom Time and Frequency Products, Inc.
$30 / Com-Net Ericsson
$38 / Datron
$40 / Icom
$48 / Garmin
$50 / GTE
$55 / IFR Systems
$60 / GEC-Marconi
$68 / Kenwood Communications
$70 / Glenayre Electronics
$74 / Japan Radio Co.
$78 / Kokusai
$7C / Maxon
$80 / Midland
$86 / Daniels Electronics Ltd.
$90 / Motorola
$A0 / Thales
$A4 / M/A-COM
$B0 / Raytheon
$C0 / SEA
$C8 / Securicor
$D0 / ADI
$D8 / Tait Electronics
$E0 / Teletec
$F0 / Transcrypt International

I'm hoping that when everything goes digital, that problem will go away since there won't be audio and video carriers.

I barely get it here at the house but the problem exists in varying degrees all over the area. YMMV.

When I lived in Florida the local cable service leaked horribly. I
DFed it down to a particular pole and reported it. Instead of getting
it fixed they accused me of stealing cable. I explained I had cable
(I paid for it), but they weren't interested in hearing about they
were broadcasting their cable signal into thin air.

From: Kevin Chessher
Topic: 25260 Message: 25260

An update is available for the 3/996XT Uniden scanners that's supposed to help with P25 decoding.

396XT <http://info.uniden.com/UnidenMan4/BCD396XTFirmwareUpdate>

996XT <http://forums.radioreference.com/uniden-scanners/234243-bcd396xt-bcd996xt-firmware-update-released.html>

I haven't personally given it a test drive yet.

Did you leave the settings at default or manually adjust them? It may
take a manual adjustment to get optimal results.

Date: 2012-02-25 23:20:55 UTC
From: Myles Barkman
Topic: 25260 Message: 25264

I don't think I'm noticing a difference either.

The Houston simulcast has a decent signal but I think the multiple signals don't mix well.

I changed the adjust mode to 11 (from 3) as the instructions suggested. The coolest thing was when you turned on the scanner when holding down the HOLD button. THAT WAS COOL!

Some channels that used to be in that system are now part of a Capacity Plus trunked system. I've heard data on other channels that may indicate there are more channels that have made the change.

The TxWARN Houston Simulcast appears to be worse for me (the scanner has yet to even detect a P25 control channel being present). I tried the default of 50, the "optimal" value of 11 and a variety of other values up to the max of 200 with no difference.

25271. RE: [HoustonScan] 3/996XT Update

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-02-26 06:45:56 UTC
From: Myles Barkman
Topic: 25260 Message: 25271

The hidden settings only stay in the menu while the scanner is on.

Once you turn it off, if you want to adjust the settings again, you have to do the HOLD-ON again (and witness the psychedelic light show).

The P25 Adjust Mode limits are 3-15 ("optimal" is 11 according to Uniden).

The P25 Adjust Level limits are 1-200 (default is 50).

Without having a constant source of audio and something like a pot or being able to use arrows to adjust the level and get immediate feedback makes it nearly impossible to figure out how these settings should be adjusted.

At least that's *my* opinion.

Subject: Re: [HoustonScan] 3/996XT Update

The TxWARN Houston Simulcast appears to be worse for me (the scanner has yet to even detect a P25 control channel being present). I tried the default of 50, the "optimal" value of 11 and a variety of other values up to the max of 200 with no difference.

To clarify my last post, I tried all Mode settings 3-15 (with Level 50) with the same results (unable to detect a P25 control channel on TxWARN Houston Simulcast) and is unable to even mute the data noise most of the time. I've been testing with a 396XT. So overall it's useless and probably worse than it was before. No documentation + no device feedback + no auto-adjust = waste of my time.

B-but you get a cool disco party when you turn it on now!

IDK if they can even truly "fix" simulcast decode with just a software update. It may take a complete redesign of the receiver chain.

Supposedly a setting of 3/50 returns it back to the auto mode. I'll try that before I revert to the previous version.

The hidden settings only stay in the menu while the scanner is on.

Once you turn it off, if you want to adjust the settings again, you have to do the HOLD-ON again (and witness the psychedelic light show).

The P25 Adjust Mode limits are 3-15 (“optimal” is 11 according to Uniden).

The P25 Adjust Level limits are 1-200 (default is 50).

Without having a constant source of audio and something like a pot or being able to use arrows to adjust the level and get immediate feedback makes it nearly impossible to figure out how these settings should be adjusted.

At least that’s * my * opinion.

25282. Re: [HoustonScan] 3/996XT Update

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-02-27 00:57:48 UTC
From: Kevin Chessher
Topic: 25260 Message: 25282

Correct, but 3/50 is supposed to return it to auto (like it was before the update).

On 2/26/2012 6:54 PM, Yuni T. Runker wrote:

25285. Re: [HoustonScan] 3/996XT Update

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-02-27 01:01:21 UTC
From: Kevin Chessher
Topic: 25260 Message: 25285

That's really odd. Almost everyone on RR is reporting stellar
improvements also, not so much in Houston.

25289. TG 4050 TxWARN 1A7

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-02-29 01:08:52 UTC
From: Kevin Chessher
Topic: 25289 Message: 25289

Some of you "EMS" types can probably identify this TG, they just toned-out to Key Map 412V.

ESD 1 EMS and either Little York or Aldine VFD. Haven't heard anything that sounds like patched P25 audio on Fire 6 or Com 5 though.

Date: 2012-03-01 23:22:03 UTC
From: Kevin Chessher
Topic: 25260 Message: 25297

Interesting observation not related to the update. On the 1A7 site 52, the 800 frequencies always have a worse error rate compared to the 700 frequencies on my 996XT. It's unknown if this is attributed to Nextel possibly being in closer proximity frequency-wise or some other anomaly.

I know no one cares about this, I just found it interesting. I'll probably spend* countless hours trying to find out why. (if you cut me I don't bleed, I leak RF)

*ok, waste

851 to 854 is probably solid with licensed channels. 770 is quite sparse.

On Mar 1, 2012, at 5:22 PM, Kevin Chessher <kchessher@...> wrote:

> Interesting observation not related to the update. On the 1A7 site 52, the 800 frequencies always have a worse error rate compared to the 700 frequencies on my 996XT. It's unknown if this is attributed to Nextel possibly being in closer proximity frequency-wise or some other anomaly.

True, but most of those are at 500+ feet AGL. I'm probably reading much
too much into this, everyone can go back to sleep.

Topic: 24940 Message: 25301

I was in the Fry Rd/ FM 529 area today and heard Katy PD. Have also heard it and KISD PD in the New Territory area of Sugarland. However, still hear nothing in the Mason Rd/I10 area. I have the control freqs as published at Radio Ref website. Any ideas or suggestions? Thanks.

Let me take a look at the FreeScan file you sent out and see if anything looks out of place.

Sent from my Verizon Wireless 4G LTE Phone

That's very possible, but I interpreted the original message as it was working before rebanding.

But I could be wrong.

Myles “likes” (the answer, not the effect the cell tower is having on your reception).

Subject: Re: [HoustonScan] Re: Katy PD and Katy ISD PD

Look around. You will see a very large and busy cell tower.

Your receiver is being "swamped". Overloaded to the point that it can't receive and or decode data from the control channel

On Mar 1, 2012, at 8:59 PM, " g.goff@... " < g.goff@... > wrote:

I was in the Fry Rd/ FM 529 area today and heard Katy PD. Have also heard it and KISD PD in the New Territory area of Sugarland. However, still hear nothing in the Mason Rd/I10 area. I have the control freqs as published at Radio Ref website. Any ideas or suggestions? Thanks.

Ok, so Clear Channel owns Total Traffic as well as Metro and the ownership was transferred to Clear Channel Metro last year. Everyone can calm down and go back to sleep.

25326. Re: Unusual federal activity

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-03-03 01:35:53 UTC
From: Eric C. Carlson
Topic: 20399 Message: 25326

414.5625 NAC 168 was active again today and yesterday downtown on and
off all day 9 AM to 4 PM.

Also I'm getting 414.75 NAC 169 simplex encrypted tonight. I've heard
414.75 NAC 482 and NAC 483 simplex encrypted before which are reported
to be Postal Inspection Service. However, NAC 169 has been used by
ICE on some of their nationwide VHF frequencies for what that is
worth.

From: Kevin Chessher
Topic: 24940 Message: 25329

But seriously, help us help you. Get FreeScan, read your radio and send the file. If I understand correctly it worked before rebanding and now doesn't, so that would point toward a programming issue. Just asking what could be wrong over and over again obviously isn't getting your issue resolved.

414.5625 NAC 168 was active again today and yesterday downtown on and off
all day 9 AM to 4 PM.

Also I'm getting 414.75 NAC 169 simplex encrypted tonight. I've heard
414.75 NAC 482 and NAC 483 simplex encrypted before which are reported to be
Postal Inspection Service. However, NAC 169 has been used by ICE on some of
their nationwide VHF frequencies for what that is worth.

I recently had a computer crash. I need the RS driver to connect my serial cable from the usb port to my PRO-96/PRO-97 scanners. Also, how do I get to COM 5?
Any/all help would be greatly appreciated.

THANKS
Hank Salzmann

25346. Re: Katy PD and Katy ISD PD

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-03-06 02:39:55 UTC
From: g.goff@rocketmail.com
Topic: 24940 Message: 25346

Kevin, I got Freescan, read my radio to it and am trying to figure out how to send you the files. The email tool on the "Yahoo Groups discussion board" does not seem to provide a way to send an attachment. If I could get your complete email address, I could use Outlook to send the files. Thank You for your help.

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-03-07 00:29:50 UTC
From: Myles Barkman
Topic: 25351 Message: 25361

I'm not very good at identifying aircraft but on the way home today, I saw a helicopter that is not of the norm around here flying along 45 northbound from the Ellington area.

I imagine it was probably scouting out the intended route a motorcade would take Friday.

I didn't get a great look at it since I was driving at it came directly overhead.

I'm thinking it might have been a dark green color.

25362. Leaving the list

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-03-07 00:30:56 UTC
From: wx5jp
Topic: 25362 Message: 25362

Hello folks,

I too am leaving the list. The SNR (signal-to-noise ratio) has just gotten too high. It's nobody's fault. It's just all the personal opinions about politics and stuff just aren't appropriate in a scanner discussion group. I've (almost) silently observed this group for almost 10 years. But... there is way too much chit-chat now that dilutes the purpose of the list. Thank you for all the valuable information that has been provided over the years. The list actually motivated me to start my own scanner website for a while. Myles thanks for a excellent mailing list but until all the chit-chat is reigned in I don't see that I can filter through all the off-topic messages to find the gems.

I never paid much attention to this since the President's arrival never coincided with mine, but how big of a TFR is put in place for something like this?

I’m not very good at identifying aircraft but on the way home today, I saw a helicopter that is not of the norm around here flying along 45 northbound from the Ellington area.

I imagine it was probably scouting out the intended route a motorcade would take Friday.

I didn’t get a great look at it since I was driving at it came directly overhead.

I’m thinking it might have been a dark green color.

there has been in the last two days a lot of c-130 traffic at Ellington especiall the c-130 intelligence aircraft making passes over houston.

but i do not know if he will be landing there as well. as the tower chatter has been routine all along . but check your 300 freq. as that is

what they use the most of for aircraft to tower as well as ground operations.

in houston they use motorcades instead of helos for getting around

Well actually the "chit chat" here and there maybe keeping it alive, I noticed nearly all of the other Texas scanner forums are virtually dead (6 to 9 MONTHS without posts), and one of the last minimally active one's being DFW is basically on life support !!! Be glad you have one that still keeps up with things, "chit chat" between friends and all !!

On Mar 6, 2012, at 18:30, "wx5jp" <lists@...> wrote:

> Hello folks,
>
> I too am leaving the list. The SNR (signal-to-noise ratio) has just gotten too high. It's nobody's fault. It's just all the personal opinions about politics and stuff just aren't appropriate in a scanner discussion group. I've (almost) silently observed this group for almost 10 years. But... there is way too much chit-chat now that dilutes the purpose of the list. Thank you for all the valuable information that has been provided over the years. The list actually motivated me to start my own scanner website for a while. Myles thanks for a excellent mailing list but until all the chit-chat is reigned in I don't see that I can filter through all the off-topic messages to find the gems.

I think it's usually a few mile radius around each venue.

Secret Service started lighting up today with P25 encryption on:
165.375 Charlie
164.8875 Oscar
167.0375 Presidential detail
166.5125 WHCA Sierra/Alpha

Basically when his aircraft is nearing the area the regional airspace is closed until he lands, then the (local airspace) TFR's follow him around within so many miles of where ever he goes.

Where is a good place to find notice of TFR? I found this :

http://tfr.faa.gov/tfr2/list.html

Is there somewhere else to look?

I think it's usually a few mile radius around each venue.

Secret Service started lighting up today with P25 encryption on:

165.375 Charlie

164.8875 Oscar

167.0375 Presidential detail

166.5125 WHCA Sierra/Alpha

I’m not very good at identifying aircraft but on the way home today, I saw a helicopter that is not of the norm around here flying along 45 northbound from the Ellington area.

I imagine it was probably scouting out the intended route a motorcade would take Friday.

I didn’t get a great look at it since I was driving at it came directly overhead.

I’m thinking it might have been a dark green color.

there has been in the last two days a lot of c-130 traffic at Ellington especiall the c-130 intelligence aircraft making passes over houston.

but i do not know if he will be landing there as well. as the tower chatter has been routine all along . but check your 300 freq. as that is

what they use the most of for aircraft to tower as well as ground operations.

in houston they use motorcades instead of helos for getting around

I'll be heading home through downtown about this time but I'll be carpooling so I'm not going to be able to stop and play.

Besides, Eric should have plenty of time to catch stuff down there.

Now as for taking off from Ellington Friday night, I might see what I can do there depending on the weather.

I'm not on FB so maybe thats where my fault is. This is my social media. I know scary. I can tone it down and focus on the groups purpose no problem. Its hard for me to take in all the good information and not let somebody know its being read. hence my "goofiness".

25392. Re: Unusual federal activity

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-03-07 04:10:30 UTC
From: Eric C. Carlson
Topic: 20399 Message: 25392

While we're on the topic of unusual federal activity, I captured some others recently:
171.5875 NAC 283 DEA -- Flint aircraft calling Flint base for radio check and I heard this two different mornings this week, probably simplex (base unheard)
172.0625 appears P25 but unable to get a NAC, probably simplex and no intelligible audio yet, heard yesterday morning
166.4 NAC 003 Secret Service Golf, encrypted, from this morning. I also have this in the past with NAC 001 and NAC 002. I suspect this is the input to 164.4 NAC 001 but I'm not sure if the NACs represent different repeater access input tones or simplex use or both.

Date: 2012-03-07 04:21:55 UTC
From: Eric C. Carlson
Topic: 20399 Message: 25393

Sorry, left one off. I also got a key-up today on 165.2875 NAC 656.
The frequency is an ATFE repeater output (in Houston it's Net 2 with
NAC 650). I'm not sure if NAC 656 is simplex or another repeater
output but it's another new one for me.

Topic: 20399 Message: 25396

Interesting

$656 is a NAC for Net-6
Usually with $650 as the output

Even simplex i have only gotten $650

Like CBP , BATFE uses a different NAC on the input only.

Good find

Ok, there are three versions of P25,
TK-5x10-series.

V1 - Conventional Analog and P25 only;
long gone.

V2 - Conventional Analog, P25
Conventional, and P25 Trunk w/ IMBE
vocoder; going away.

V3 or TK-5x10G-series - Completely new
PCB, etc. Does everything that the V2
did plus it has the AMBE+2 Vocoder

The K-type indicates that it is a North
American radio although sometimes it
holds for South America also.

V1 Mobiles and Portables - used
different firmware but the same
programming software

V2 Mobiles and Portables - used
different firmware but the same
programming software

V3 Mobiles and Portables - use the same
firmware and the same programming
software

The number after the "K" indicates what
type of features such as four key or
full key pad, band split, etc.

25398. Re: Leaving the list

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-03-07 14:15:51 UTC
From: Lou
Topic: 25362 Message: 25398

I was tied up on Jury Duty yesterday, but here goes.

Myles:
I have been on this list for quite a while, almost 9 years and I sort of monitored it before actually joining it. Over the years it has transitioned around from general to specific and back again. It, like all such lists, have a pendulum sort of existence. It seems like the "silliness" is just part of the charm of this list as it never seems to get out of hand (unlike a certain other "tavern" type area I can think of) and always circles back to communication topics.

Folks leaving:
That said, what I don't understand is why folks need to announce their intention to leave or for that matter why leave at all. If you don't like the email volume, change your settings for the group. You can either get a digest or choose to get only special announcement emails from the owner (or moderators) or indeed you can choose to receive no emails at all and just come to the group and check in when you want. That last choice is the equivalent of leaving the group without actually leaving, you get no emails but still can visit and post when you want. BTW, I am not sure I understand how someone can post to the group and not know how to unsubscribe or change settings for the group.

25402. Fwd: Fw: [BLT] FW: NOTAM/TFR Issued for Houston, TX - 3/9

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-03-07 21:04:42 UTC
From: Dwayne Jones
Topic: 25402 Message: 25402

Cross post from another list.

Dwayne

A new FDC NOTAM/TFR has been issued for the greater Houston, TX
metropolitan area for Friday, 3/9 from 4:15p until 9:30p CST. The TFR is
issued for security purposes to cover VIP movement in this area. Outdoor
Radio Controlled model aircraft operations are prohibited within the 35nm
circle for the specific times listed below. Control Line and Free Flight
modelers should use discretion and follow the directions of local law
enforcement and government officials when operating within the TFR. CL and
FF operations should not be conducted within the 10 and 11nm inner circles.
Please note that TFRs are subject to change with very short notice. Check
back often for the most current NOTAM/TFR information.

Timely alerts are also available on the web at: www.modelaircraft.org/**
membership/clubs/notams.aspx<http://www.modelaircraft.org/membership/clubs/notams.aspx>
<h**ttp://www.modelaircraft.org/**membership/clubs/notams.aspx<http://www.modelaircraft.or
g/membership/clubs/notams.aspx>>
or on your cell phone at:
Twitter.com/amagov<http://**twitter.com/amagov<http://twitter.com/amagov>
>.

See the link to the TFR below for more detailed information regarding the
restrictions:

* Area 1 (3/9, 4:15p - 9:30p CST)
(35nm radius from Latitude: 29º40'02"N, Longitude: 95º19'55"W)
* Area 2 (3/9, 4:15p - 5:15p CST)
(10nm radius from Latitude: 29º36'24"N, Longitude: 95º09'37"W)
* Area 3 (3/9, 4:30p - 9:00p CST)
(11nm radius from Latitude: 29º45'52"N, Longitude: 95º23'42"W)
* Area 4 (3/9, 8:30p - 9:30p CST)
(10nm radius from Latitude: 29º36'24"N, Longitude: 95º09'37"W)

I just caught some traffic on UTAC41 453.4625 [156.7] which sounded like law enforcement talking about someone running towards the Memorial Northwest subdivision. That's just south of Hooks Airport so if I'm getting it (weakly) downtown I'm assuming it's a repeater. This is a new one for me. What agency would be using this?

For power users, especially if you are not hooking it up to GPS for mobile use, I think the HP1 is overall a poor choice (to make it worthwhile at all you have to spring for the Extreme upgrade which makes the total price hard to swallow). If you just want to listen to public safety and want to keep it simple then the HP1 could be fine. Power users in my opinion are better served by the 396XT/996XT, granted that the HP1 Extreme does have some features that are not available on those models.

Thanks Eric for your reply and I have been looking at the Uniden 396XT/996XT and it is in a close running with the HP1 as to the one I want to buy.
If I do go with the HP1 then I plan on the extreme upgrade as well, and then adding the gps gets it close to $700.
I would pay out Less money for the 396XT/996XT.
Overall most owners of the HP1 are pleased and like the ease of use....from what I've seen.

i have one and i like it a lot
though i have not been able to getthe DPS

system to work on it. the sentinal
system is very easy to work with once

you git it all loaded in.

every monday by noon the new down loads are ready
to be entered into

your scanner. the folks on the HP1 forum are more
then happy to work

with you an any problem you may have. the best
price i have found for it

was at FRYS stores so you might want to check
there before you buy.

the only thing you have to remmeber is not to over
load the system when

choosing what to listen to and in what area you
also choose to listen to.

but i have no problem with galveston,brazoria,
harris,chambers counties.

I’m not very good at identifying aircraft but on the way home today, I saw a helicopter that is not of the norm around here flying along 45 northbound from the Ellington area.

I imagine it was probably scouting out the intended route a motorcade would take Friday.

I didn’t get a great look at it since I was driving at it came directly overhead.

I’m thinking it might have been a dark green color.

Subject: [HoustonScan] presdiential visit

there has been in the last two days a lot of c-130 traffic at Ellington especiall the c-130 intelligence aircraft making passes over houston.

but i do not know if he will be landing there as well. as the tower chatter has been routine all along . but check your 300 freq. as that is

what they use the most of for aircraft to tower as well as ground operations.

in houston they use motorcades instead of helos for getting around

Hi Gary, in the scanner market today it's hard sorting thru all that's going on. But this site has been very helpful for me.
I'm leaning toward the HP1 simple because of ease of operating and capabilities it would give me.
I hate making decisions...just want it to last for more than a year before I have to buy something new...!

Thanks Kevin and yes I would like to monitor all possible but I understand No scanner is made that will monitor HPD/HFD.
I might be wrong there but it's just what I've read off the forum site on RadioReference.
I'm in Lufkin Texas and the police and sheriff dept went digital P25.
I can get these on my 250D /apco card but the DPS in my area I haven't been able to listen to.
Also I know there is a new phase of the system that we are not quite sure of that's coming our way.
This has been why I've been holding off.....
Do you have any suggestions ... your input is much appreciated.

Jeff

You stated you want it to last more than a year, are you wanting to monitor HPD/HFD? That may have an impact on your decision.

Hi Gary, in the scanner market today it's hard sorting thru all that's going on. But this site has been very helpful for me.
I'm leaning toward the HP1 simple because of ease of operating and capabilities it would give me.
I hate making decisions...just want it to last for more than a year before I have to buy something new...!

Well at this point in tim you can monitor HFP/HPD but soon they are suppose
to do phase 2

Caught this on the way home.

172.2875 encrypted

170.375 encrypted

166.5125 encrypted

170.675 encrypted

460.575 special event 1 at Ellington

460.225 HPD aiport police at Elligton

953 Metro PD TAC 2

Looks like they closed down the 45 Gulf HOV lane just after I got off it at Monroe P&R.

Guessing they may be bringing him north on it.

Mainlanes suck right now.

Haven’t heard much on 126.05 ellington tower.

I don’t even know if he’s landed yet.

I’m not very good at identifying aircraft but on the way home today, I saw a helicopter that is not of the norm around here flying along 45 northbound from the Ellington area.

I imagine it was probably scouting out the intended route a motorcade would take Friday.

I didn’t get a great look at it since I was driving at it came directly overhead.

I’m thinking it might have been a dark green color.

there has been in the last two days a lot of c-130 traffic at Ellington especiall the c-130 intelligence aircraft making passes over houston.

but i do not know if he will be landing there as well. as the tower chatter has been routine all along . but check your 300 freq. as that is

what they use the most of for aircraft to tower as well as ground operations.

in houston they use motorcades instead of helos for getting around

Looks like they closed down the 45 Gulf HOV lane just after I got off it at Monroe P&R.
Guessing they may be bringing him north on it.
Mainlanes suck right now.

Haven’t heard much on 126.05 ellington tower.
I don’t even know if he’s landed yet.

I never paid much attention to this since the President's arrival never coincided with mine, but how big of a TFR is put in place for something like this?

I’m not very good at identifying aircraft but on the way home today, I saw a helicopter that is not of the norm around here flying along 45 northbound from the Ellington area.
I imagine it was probably scouting out the intended route a motorcade would take Friday.
I didn’t get a great look at it since I was driving at it came directly overhead.
I’m thinking it might have been a dark green color.

Subject: [HoustonScan] presdiential visit

there has been in the last two days a lot of c-130 traffic at Ellington especiall the c-130 intelligence aircraft making passes over houston.

but i do not know if he will be landing there as well. as the tower chatter has been routine all along . but check your 300 freq. as that is

 what they use the most of for aircraft to tower as well as ground operations.

in houston they use motorcades instead of helos for getting around

That's funny... I got the power outage around 3:30 PM but I'm back up and running.

Those data bursts are the wireless SCADA commands that cut power to your neighborhood. :)

25453. RE: [HoustonScan] presdiential visit

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-03-10 00:13:30 UTC
From: Myles Barkman
Topic: 25351 Message: 25453

My power was on but right after that, the internet, phone and cable went out. Power must have gone out somewhere else in the plant. Probably part of the conspiracy. Came back on when Obama made it to Minute Maid.

Caught activity on 170.625 and 168.825. Both encrypted.

I did get to hear AF1 talk to tower and ground.

There’s times I wish I had an aircard.

So far today:

164.4

164.8875

165.375

166.5125

460.35

460.4

460.425

460.45

-Eric

On Fri, Mar 9, 2012 at 4:18 PM, Myles Barkman <kg5ai@...> wrote:

Caught this on the way home.

172.2875 encrypted

170.375 encrypted

166.5125 encrypted

170.675 encrypted

460.575 special event 1 at Ellington

460.225 HPD aiport police at Elligton

953 Metro PD TAC 2

Looks like they closed down the 45 Gulf HOV lane just after I got off it at Monroe P&R.

Guessing they may be bringing him north on it.

Mainlanes suck right now.

Haven’t heard much on 126.05 ellington tower.

I don’t even know if he’s landed yet.

Subject: [HoustonScan] presdiential visit

there has been in the last two days a lot of c-130 traffic at Ellington especiall the c-130 intelligence aircraft making passes over houston.

but i do not know if he will be landing there as well. as the tower chatter has been routine all along . but check your 300 freq. as that is

what they use the most of for aircraft to tower as well as ground operations.

in houston they use motorcades instead of helos for getting around

Subject: Re: [HoustonScan] presdiential visit

I think it's usually a few mile radius around each venue.

Secret Service started lighting up today with P25 encryption on:

165.375 Charlie

164.8875 Oscar

167.0375 Presidential detail

166.5125 WHCA Sierra/Alpha

Date: 2012-03-10 01:05:24 UTC
From: ecps92@earthlink.net
Topic: 25351 Message: 25457

Both have been recent captures as part of the presidential details

FLOTUS is in Boston tonight and only using 165.3750 $001 direct

Sent from my Motorola Smartphone with Sprint Direct Connect on the Now Network from Sprint!

-----Original message-----

Did you catch a NAC on 167.0375? I hadn't heard that one.

I see others report N001 and use of 167.0125 for Vice Presidential Detail.

Subject: Re: [HoustonScan] presdiential visit

I think it's usually a few mile radius around each venue.

Secret Service started lighting up today with P25 encryption on:

165.375 Charlie

164.8875 Oscar

167.0375 Presidential detail

166.5125 WHCA Sierra/Alpha

I'm not very good at identifying aircraft but on the way home today, I saw a helicopter that is not of the norm around here flying along 45 northbound from the Ellington area.

I imagine it was probably scouting out the intended route a motorcade would take Friday.

I didn't get a great look at it since I was driving at it came directly overhead.

I'm thinking it might have been a dark green color.

there has been in the last two days a lot of c-130 traffic at Ellington especiall the c-130 intelligence aircraft making passes over houston.

but i do not know if he will be landing there as well. as the tower chatter has been routine all along . but check your 300 freq. as that is

what they use the most of for aircraft to tower as well as ground operations.

in houston they use motorcades instead of helos for getting around

http://www.nws.noaa.gov/nwr/stations.php?State=TX
List shows they call this "Tomball". Maps still show coverage based on
transmitter being downtown.
Appears there was a lack of coverage around Wills/Panorama Village.
The transmitter is now about 45 miles away and I am using an external
antenna to pick it up better than the built-in telescopic.
Galveston is about 33 miles away. I can pick up Galveston better on the
telescopic whip so I'll try it out.
I preferred 162.400 since I had a decent signal and didn't worry too much
about band openings taking out the local signal.
But with Galveston, I'm sort of on the fringe and sometimes College Station
competes with the signal.

Here is my complete rundown:
134.45 Houston TRACON - Air Force 1 departing to Lufkin
164.4 [n 001] USSS Papa - encrypted
164.8875 [n 001] USSS Oscar - encrypted
165.375 [n 001] USSS Charlie - encrypted
166.5125 [n 001] WHCA - encrypted except one radio check in the clear
167.0375 [n 001] USSS Presidential Detail - encrypted, active 3/6 and
3/8 but not day of visit
460.225 [123.0] HPD Car-to-Car
460.35 R [123.0] HPD Special Operations - downtown crowd control
460.375 [123.0] HPD Tactical 1 - road closure units car-to-car
460.4 R [123.0] HPD CID - protective detail (20xx units) and venue command posts
460.425 R [123.0] HPD Citywide - primary command post and motorcade
460.45 R [123.0] HPD Detectives - traffic control details and road closures
460.575 R [127.3] HFD Tactical - command posts (airport and downtown)
464.875 R [123.0] River Oaks Patrol (not directly involved but were
keeping tabs on road closures, etc.)
CoH Trunked 35632 (HMST-1) HFD hazmat teams
No CAP or other military activity noted.

From what he sent me off list this is/was a case of not having the site type as rebanded, which means no custom tables set. This is why it worked in some areas as he was on the Gessnet, Pickens, etc. sites at those times.

I've learned not to recommend anything to anyone because someone will always shoot me down. Anyway, just keep in mind that HPD/HFD will be switching to a Phase II TDMA capable system within the next year or so and no scanner is currently capable of monitoring that...yet.

A friend from PG County, Maryland is claiming that his PSR800 is decoding Phase II-compliant P25 talkgroups off their system. He's also claiming that their system is using both X2 and compliant Phase II so IDK. I'd be more worried about wholesale encryption than the flavor of TDMA personally..

You can't have both X2 and Phase II TDMA on a system, it's one or the other. I can personally guarantee that a PSR-800 can't currently (with the current public CPU/DSP versions) decode Phase II TDMA.

25480. HLSR

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-03-12 02:45:05 UTC
From: Eric C. Carlson
Topic: 25480 Message: 25480

I noticed a new repeater being used at Reliant Park that is probably specific to HLSR.
464.625 DCS 205
I don't think I've seen this one reported before. I'm not sure what it is used for yet. The HLSR conventional repeaters seem to still be in use again this year.

Did it sound like this? I caught them doing this a couple of months ago with this sweeping tone presumably to do some repeater/radio maintenance.

25485. RE: [HoustonScan] HFD frequencies

Yeah, that's the simulcast alignment test tone. They strip PL when running it, so plug in the CTCSS tone and you won't hear it.

This one is super exciting. It appears to be bulk trash pick-up and
transportation to the dumpsters and compactors.

From: Eric C. Carlson
Topic: 25490 Message: 25490

The documents here have the TxWARN channel plans for the various
conventional interop frequencies on VHF-high, UHF, 700 and 800 in
addition to the TxWARN trunked interop talkgroups.
http://www.hctx.net/itc/trsradio/formsandmanuals.aspx
(The trifold document link names aren't matched up with the right the files.)

From: sandyJ
Topic: 25491 Message: 25491

the only cable i could find to use i have to ask you guys on it.

it is a USB to scanner cable. has anyone ever worked with this

or better yet will it work for this.

I will be using the FREE SCAN program to rework my scanner.

if i can figure out how to use this program.

anyhow any help will be appreciated from any and all.

That's quite a coup. Wonder how that will affect Deer Park and South Houston when/if the existing 2318 site goes off the air.

Sounds like I just heard a strong control channel on there, but it didn't last long and I'm not sure what type it was.

Maybe I'll try to record it next time.

Look for the official announcement of the transfer of control from Proctor Williams to SE TX Telecom to be done Thursday morning....ANOTHER station staying LOCAL AND LIVE!!!!! And increased power.....WE WILL service the triangle with live news, traffic and sports..look for MUSIC to come on 990 or 1150 Port Neches next....WE HAVE plans on AM and some FM xlators as well as some other projects.....AM CQUAM stereo on all station except KSET...leave it as talk 10kHz analog....Bruce want to see 1310 and LMA it back?????????? May be more cost effective??? Think about it. Looking for GOOD sales people and GOOD engineering / RF people....will be able to offer health insurance at a LOW rate.......

I have several large RF two way projects coming up along with the BCST work....need quality and fast!!!!

Your new local media mogul....

Christopher W. Boone WB5ITT

25523. PRO106,PRO197,GRE PSR500 trunking issue

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-03-20 22:42:50 UTC
From: James Luhn
Topic: 25523 Message: 25523

I posted my problem a few months ago but I did not receive any replies. My PRO106,PRO197, and GRE PSR500 have the same problem while monitoring the Texas City / Galveston channels on the TxWARN trunk. The scanners stop on a programmed talk group, the activity indicator is illuminated, but there is no audio. This problem occurs very randomly but certainly aggravating when it does. It is almost like only one channel of the trunk frequencies is involved. My PRO164 works fine and does not exhibit the no audio problem. I have the same custom table in all of the scanners. I am suspicious that the scanners may be jumping to the wrong frequency but I have not had a chance to prove this theory. I have the latest firmware in the radios. This problem started after the frequencies were changed (rebanded). I have programmed over a dozen of these radios and all exhibit the same issue. Any suggestions?
-james

If you can identify the frequency it's trying to go to that may tell us
something. You should be able to get that to display on the radio.

I am using the trunking table for 800 MHz "rebanded" that is in the Starrsoft WIN500 software. This is the table:

Lo Chan Hi Chan Offset Base Frequency Step
440 559 440 851.025000 25.000
0 719 0 851.012500 25.000
720 759 0 848.000000 25.000
815 831 0 846.625000 25.000
958 958 958 868.975000 25.000
961 1022 0 843.40000 25.000

I finally have had enough time to watch my scanner carefully to catch the problem. When the scanner exhibits the light on and no audio, the scanner is on 864.28750 which obviously will not work. Of course the no audio is a result of the scanner looking at a wrong frequency. I have another PRO197 set to scan just the trunk frequencies in hopes of catching what frequency the scanner should be on. When the problem occurs, the scanner appears to always be vectoring to 864.28750. Trying to catch the actual frequency is a bit difficult. I will eventually get it.

FYI, I have 853.58750 and 853.80000.

I also have a BCD996XT and a HP1 that I am programming now to see if these scanners have the same issue. I may go nuts listening to half a dozen scanners. A one armed paper hanger also comes to mind.

Any advice will be appreciated.

Try this as a test, only use the first 2 entries for the custom tables and see what happens.

That would be channel 531. The correct frequency is likely 853.3000 MHz.

Is this the Texas City site?

Make sure the table you gave was applied to that site. Also make sure each row is in the order you've shown here.

The 440/559 entry must appear before the 0/719 entry.

The table is applied to the site and the table order is exactly as shown. This table works fine in my PRO 164. I am trying a table with only the first two entries now. Since this problem is kinduv random, it may take some time to see what happens. I am also writing a log file to help diagnose the problem.
Tnx,

After studying the trunk frequencies listed in Radio Reference and the frequency/channel assignments at http://www.batlabs.com/800chan.html , it would appear that only the first two table entries is all that is needed. I am trying my best to understand how the channels and frequencies relate. Any comments?

F = base + (LCN - offset) * spacing

Where LCN >= low and LCN <= hi.

Eg. 851.025 + (531 - 440) * 0.025

= 851.025 + 91 * 0.025

= 851.025 + 2.275

= 853.300

25544. Treasury OIG

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-03-22 00:29:02 UTC
From: Eric C. Carlson
Topic: 25544 Message: 25544

The Treasury OIG apparently just installed a new repeater on 164.5375
NAC 1F1. This has been reported as Treasury OIG in the northeast.
They were testing on "the new radio system" today. I also heard
"Houston base station." Signal was 5/5 inside the Loop. Input may be
172.6375 but I haven't confirmed that. They are probably also the
users on 165.1 NAC 1F1 simplex.

If you want to stick with the device you have now you are hard-limited to Verizon or Sprint. T-Mobile and AT&T operate GSM voice networks.

FWIW AT&T seems to have the best rural east Texas coverage. Verizon has the best overall nationwide coverage, but also some of the worst customer service. T-Mobile consistently ranks highest nationally for customer service quality, but doesn't have great rural coverage. So any way you go is going to be a trade-off.

Also keep in mind that Boost is a red-headed stepchild for Sprint.. they have been known to limit tower access to Boost subscribers, and will kick an in-progress Boost call off a tower if it's loaded and a Sprint subscriber places a call request. So your coverage may well improve with contracted Sprint service. If the FCC approves their request to use CDMA in the ESMR band I would expect coverage to improve greatly, since they would be operating the equivalent of Verizon's 850/1900 CDMA network at that point.

Hopefully they thought about tech access this time and have a separate
shelter for the equipment as opposed to having it inside the building.

Sent: Wednesday, March 21, 2012 8:29 PM
To: HoustonScan
Subject: [HoustonScan] Treasury OIG

The Treasury OIG apparently just installed a new repeater on 164.5375 NAC 1F1. This has been reported as Treasury OIG in the northeast. They were testing on "the new radio system" today. I also heard "Houston base station." Signal was 5/5 inside the Loop. Input may be 172.6375 but I haven't confirmed that. They are probably also the users on 165.1 NAC 1F1 simplex.

25565. Air intercept exercise

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-03-23 03:15:07 UTC
From: Eric C. Carlson
Topic: 25565 Message: 25565

There was an air intercept exercise near Houston today (may have been over the Gulf).

Omaha 3SK (N423SK, Lockheed P-3B early warning aircraft) squawking company 3
CAP 4242 (N982CP, Cessna 172R) "playmate" (target aircraft) squawking company 2
CAP 4240 (N9879E, Cessna 182R) "high boy" squawking company 7

Omaha 3SK requested 15 mile separation calls.

Activity today on (assuming this was all related):
136.375 CBP air-to-air
165.2375 CBP Net 1
311.0 several EAMs, "Lost Dime standing by for traffic"
323.8 "Lost Dime" and "Sky Mav" air-to-air with radio checks and testing an air-to-air RF link, "Lost Dime we're currently burning off RF13 burning high for air to air link over," "we were burning as well," "did you switch your receive antenna"
350.025 CBP Blue 3

Also this morning multiple aircraft (including Omaha 5424X and DPS 107) were doing surveillance of a vehicle in south Texas on 165.2375 (there was another band opening this morning). Eventually one aircraft requested they switch to "RGC Tac."

Topic: 25523 Message: 25572

I downloaded Win500 and was able to reproduce the symptom. In Win500 you have to perform 3 distinct processes for rebanded systems, first enter the new frequencies, second populate the custom entries and third choose to use the "Custom" tables from a drop-down menu. If you don't choose the custom tables and leave it as "Default" you get the exact problem below. The OP has made this change and I'm pretty sure it will resolve his issue.

Topic: 25523 Message: 25573

Kevin is much to kind. He should have called me "dummy". As always another pair of eyes is so valuable in solving what has turned out to be a rather simple and easy to fix problem. I sincerely appreciate everyone who responded to my cry for help. The drop down menu to select "Custom" table is a most important one. How I missed that I do not know. I am pretty sure the problem is fixed. One obvious observation is that the scanner performance (time to reception after control channel initiation) is improved. I offered Kevin a beer as a reward but, like me, he does not drink alcohol. It looks like a Dr Pepper will be the reward. I'm not sure how to pay my reward but I will make it happen somehow. I think I owe others a cold one too. Thanks a million to all!!

121.95 is used by Snoopy 1 (confirmed in Houston) but Snoopy 1 mostly stays
on the east coast. Snoopy 2, which is the more frequent visitor to
Houston, has consistently used 123.325.

From: Kevin Chessher
Topic: 25584 Message: 25584

Do we have any frequencies for this yet? I searched the stadium owners, Houston Dynamo and it's partners and couldn't find anything.

If this webcam is actually live, they have the lights on (and people are out there at 8:40 at night)...

No, just construction radios at this point I would think. I haven't seen any licenses or applications show up yet. 5 Star Event Services apparently has the security contract or is at least supplying some event staff. http://www.5starstaff.com/

25591. FBI multicasts

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-03-31 15:26:01 UTC
From: Eric C. Carlson
Topic: 25591 Message: 25591

The two FBI multicasts appear to be tied together today. I'm seeing
them both key-up together which I haven't noted before.
169.6625 outlying
170.375 outlying
170.8625 Houston
171.6125 Houston
171.6875 Houston
172.2125 Houston
172.2875 Houston

Also, conditions are great right now.

25592. Houston Children's Festival

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-03-31 16:06:54 UTC
From: Eric C. Carlson
Topic: 20613 Message: 25592

Frequencies here:
http://wiki.radioreference.com/index.php/Houston_Children%27s_Festival

These appear to be the same radios as last year and the same 461.xxxx DCS 2xx radios we've seen at other events. These radios may belong to the Mayor's Office of Special Events or the Spectrum event management company.

>

It doesn't appear that CBP has cut-over to P25 in Texas yet. You are probably hearing ICE units doing surveillance with a CBP helicopter on the CBP/ICE "A" zone channels. ICE is P25 on their own channels in their "B" zone.

> **
>
> Another day, heard BATFE Surv TAC 1 167.1625 N650. Sounded like they were
> on the south side.
>

I heard something there on 3/29. They have also been using 170.9625 NAC 650 recently (Tac 2).

> **
>
> I guess it’s safe to take out the old 417 and 418 MHz DEA channels?
>

I think so. They appear to have been cut-over to the new P25 channel plan for quite a while now. They have also been reported on the TxWARN P25 system recently on talkgroup 1212.

Should have posted this Sunday. Try laying your discone on it's side like this. Actually, I saw it like this a few days ago. My shoddy installation of tying it off to the chimney finally caught up to me. The cheap yellow rope finally have way from the elements. If it weren't for the HOA, I wouldn't have to hide it behind the chimney and I would just put it on my 30 ft telescopic mast.

Is that Hardi or wood? It looks like it's either separating or has water damage.

So many names for this Analog forestry channel
BLM Work, Travel 2, Maintenance, Tactical, Off Park Net, Work, Intercom, Project

However it is also used by many other agencies, outside of forestry [BIA, BLM, USFS, NPS, BIA, USF&W and NIFC]

One of them is BATFE Tac-4, others are
US Capitol PD as a Travel Channel [outside of DC]and here in New England as well as previously reported on this list for Houston we had $167 for the FBI and not sure where in TX but $300 for an UnIdent Agency.

Kind of reinforces the methodology some of us use of leave the tone Open and look for P25 and Analog on Any Freq :)

Has anything changed with Metro PD lately. I am unable to pick them up anymore. I was listening to them on some Spectras on the N Gessener tower but now I am unable to get anything. I have a rebanded scanner as well and I am not having any luck with that either. Thanks for everyone's help in advance.

25660. RE: [HoustonScan] Metro PD

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-04-05 20:56:09 UTC
From: hishy@mototaku.net
Topic: 25652 Message: 25660

At least one of their tac channels is encrypted now, either 1 or 2 (I think 2, but don't hold me to it.)
Look for some future usage of the City 700 system too.

The new CoH radio system will use the multi-band 400/700/800 Motorola APX radios. This should make the transition from old to new straight forward (just the switch radio to the new zone).

The radio zones for APX7500 mobile radios for HFD:
FD UHF E (old system channels A1-A8, B1-B7 and HPD Citywide)
HC S INTEROP
HC T INTEROP
HC U INTEROP
HFD EAST
HFD WEST
HFD - Med
HFD - A/I
COH
XICS
YICS
Harris Co. MA
NPSPAC
FD MIR 800 I

The radio zones for APX7500 mobile radios for HPD:
PD UHF A (old system channels A1-A12)
PD UHF B (old system channels B1-B12)
PD UHF C (old system channels: HFD A6 and repeats of HPD channels from zones A and B)
Patrol Disp
Tactical 1
Tactical 2
Criminal Invs
Special Invs
HCSO
HC Constables
Metro PD
MONT CO
Chambers
HC S Interop
HC T Interop

Just a heads-up, Platinum Event Services out of Dallas now has the security contract at Minute Maid Park (it had been 5 Star for as long as I can remember).
http://www.platinumesi.com

I didn't get a good look at any radios so I'm no help there.

As far as I know, 5 Star used the MMP channels for events there. I haven't seen anything else for them reported at MMP. I would assume Platinum is doing the same but anything is possible.

MMP has also changed their license to TRBO on all channels so they should be rechecked to see if they are not analog anymore.

PWE (public works/engineering) will stay on 800, but with Phase II P25 just like fire & police. I would expect CMOC and the hospital stuff to get integrated with Fire/EMS on the 700 side.
The system was funded entirely with a DHS grant. We can argue all day long whether or not 700 P25 was the "correct" route to go (I would have preferred a multi-site voted/simulcast UHF P25 conventional system personally) but the fact of the matter is that the current UHF systems are dying a painful death and facing a narrowband sunset date at the end of this year.

I like how the "trunking" system works on the portable, you push the PTT
button then manually switch to channel 7.

But then again it probably didn't cost a billion dollars either.

25716. Filtering

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-04-09 19:51:59 UTC
From: Kevin Chessher
Topic: 25716 Message: 25716

I believe I finally have my filtering perfected. I have been using a PAR FM broadcast filter at home for several years and it really helped, but I felt I was still missing stuff on VHF. I made an open-stub for TV channel 8 and that again helped a lot so I purchased a PAR filter tuned to ch 8. Still thinking I was not quite there I made open-stubs for ch 11 and 13 and tried them and reception improved still. Open-stubs are broadband and cause unwanted nulls in other parts of the spectrum so I ordered PAR filters for ch 11 and 13. Open-stubs are good for troubleshooting where you're desense is in the band but aren't a good idea for a permanent solution.

I took this setup mobile and did some testing with awesome results. I used a Uniden 996XLT attached to a MaxScan 1000 antenna on the roof, I used NOAA weather radio as my test frequencies since it's always transmitting.

At Hwy 6 and Kitty Hollow Park in Mo City (in the shadow of ch 8, 11 and 13) without any of the TV filters I received absolutely nothing on any NOAA channel. I tried all sorts of combinations of the filters but the best results were with all 3 which allowed me to hear 162.400, 162.425, 162.45 and 162.55 full quieting.

I drove miles away from the above area and tried with and without the filters to check for possible discernible insertion loss due to the filters and noticed none.

As a general rule of thumb, FM broadcast affects the R/S, GRE brand scanners, VHF TV affects both Uniden and R/S, GRE. A real easy way way to test for overload desense is to apply the attenuator, if the signal cleans up (sounds better) or you can actually start hearing what you couldn't hear before a filter should solve your problem.

LCRA EDACS in Waller Co
The LCRA site in Waller County is missing some voice channels. We need someone to submit confirmed voice channels for this site to the Radio Reference database. Check the frequencies for the "FIELDSTORE" site - FCC license WPRJ768 location 2. The LCNs for three control channels are already mapped out but there are likely two or three voice channels.

WPRJ768 (LOWER COLORADO RIVER AUTHORITY) FCC Callsign Details

And 159.2175, with a DPS dispatcher override on both VHF channels.
Sounds like a lot of traffic stops from what I've heard, mainly on the east side of town. I thought it might have been a temporary patch for a pursuit that got left on by accident.

25743. Chase susoect

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-04-12 01:59:56 UTC
From: Kevin Chessher
Topic: 25743 Message: 25743

HPD chase suspect from earlier ended up in a chase with Austin County. He went down a gravel road possibly into a field. DPS 102 in route, ground contact on Tx Law 1.

From: Myles Barkman
Topic: 25732 Message: 25745

I wondered what was going on earlier. I was hearing mobiles and base on 154.665. Must have been due to the patch(es). I was hearing units out on Hwy 90 east of Houston talking through the Huffman transmitter.

And 159.2175, with a DPS dispatcher override on both VHF channels.

Sounds like a lot of traffic stops from what I've heard, mainly on the east side of town. I thought it might have been a temporary patch for a pursuit that got left on by accident.

25754. New to the scanning world

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-04-15 02:34:59 UTC
From: cjctxs
Topic: 25754 Message: 25754

I am new to the scanning world.
In the past I had a few analog scanners. But with all the changes to rebanding I had to upgrade to digital. My last scanners where not trunking. I just purchased a pro 197 and got ARC 500 to program it.
My question is I live in the Humble /Kingwood area How do I know what sites to use to program with beside the obvious sites with the names near by.I also would assume the wallisville site would be with in my range but I get nothing. Maybe I am noty programing it correctly but the Humble and Huffman sites work fine.
Any ideas?

That's a pretty common phrase among agencies in the region (not just HFD or even greater Houston.) I can't even remember the last time I heard "landline" used outside of CB or ham radio.

25760. Uniden BC296D for sale

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-04-15 21:46:34 UTC
From: John Mayson
Topic: 25760 Message: 25760

All,

I have finally decided to sell my Uniden BC296D handheld scanner.
Details can be found here:

https://plus.google.com/u/0/100189201683309462509/posts/bT582gBE55W

Please send questions directly to me, not the list (john@...).
I am offering it to the scanning community first. If it doesn't sell
I will offer it on Amazon.com or eBay.

List owners, this will be the one and only announcement for this scanner.

If anything he should refer to us as "CenterPoint" - especially if he is talking about transmission & distribution related items. J This would include shutting power off to specific units or buildings.

Actually, nearly all the "old chief's" are gone. It's just a term that stuck with the department over time (as well as many other departments), if you listen closely you will hear "call my cell" or another oldie "1021-me" on occasion. Hope those aren't to irritating to listen to !

Probably already one floating around, but..

How to tell if you're a Houston old-timer.

You call IAH "The big airport".
You still say Transco, Allied and TCB.
MLK Blvd is still Southpark.
You remember when 610 didn't cross the ship channel. (Even older, you remember when 610 didn't exist)
You saw Elvis in the Astrodome.
You saw the Beach Boys in the Sam Houston Coliseum.
You remember the Foley's Thanksgiving Day parade.
You watched Don Mahoney and Jeanna Claire and/or Kitirik and/or Houston Wrestling.

Probably already one floating around, but..

How to tell if you're a Houston old-timer.

You call IAH "The big airport".
You still say Transco, Allied and TCB.
MLK Blvd is still Southpark.
You remember when 610 didn't cross the ship channel. (Even older, you remember when 610 didn't exist)
You saw Elvis in the Astrodome.
You saw the Beach Boys in the Sam Houston Coliseum.
You remember the Foley's Thanksgiving Day parade.
You watched Don Mahoney and Jeanna Claire and/or Kitirik and/or Houston Wrestling.

165.950 is back? I haven't heard that one in years. Somewhere I still have my tape of them doing a surveillance years ago on this repeater and it was obvious they were drunk. They would stop and get more "Dr Peppers" as they called them every so often. Actually that was one of the last operations I heard from them before they went silent and then reappeared on UHF.

For anyone who monitors the ARINC En Route Service, take note (if you haven't yet) that 131.65 is no longer the frequency covering the Houston area. The new frequency is 131.175 as of earlier this month.

25791. RE: [HoustonScan] scanning updates

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-04-18 01:39:51 UTC
From: Myles Barkman
Topic: 25593 Message: 25791

Heard lots of encrypted traffic on BATFE TAC 2 170.9625 coming home today. They were using NAC 650 and it sounded like a repeater output. I listened to it with my dual-band rig and I could hear a 5-second squelch tail buzz after the "static" voice traffic.

Subject: Re: [HoustonScan] scanning updates

On Sat, Mar 31, 2012 at 1:27 PM, Myles Barkman <kg5ai@...> wrote:

A few days ago, caught some aircraft on 169.450 simplex PL 100.0. Is P25 ever used on this? I don't think I'm set up to listen for it.

It doesn't appear that CBP has cut-over to P25 in Texas yet. You are probably hearing ICE units doing surveillance with a CBP helicopter on the CBP/ICE "A" zone channels. ICE is P25 on their own channels in their "B" zone.

Another day, heard BATFE Surv TAC 1 167.1625 N650. Sounded like they were on the south side.

I heard something there on 3/29. They have also been using 170.9625 NAC 650 recently (Tac 2).

I guess it's safe to take out the old 417 and 418 MHz DEA channels?

I think so. They appear to have been cut-over to the new P25 channel plan for quite a while now. They have also been reported on the TxWARN P25 system recently on talkgroup 1212.

25801. Magnetic Mount CB Antenna- Short??

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-04-19 21:36:48 UTC
From: daysand16
Topic: 25801 Message: 25801

I have a old CB Antenna from Radio Shack model # 21-989.

I was about to put a PL-259 connector onto the Antenna Coax.
I was checking to see if the Coax was in good shape and when I checked the Coax with a Continuity checker, there was a direct connection between the Coax Lead and the Grounding shield.

I was very supprised.

I would think there should NOT be a direct connection between the Coax Lead and the Grounding shield.

Could this be a Short in the Coax, as I would think???
or
Could it be possible that this type of Magnetic Mount CB Antenna, would have the Lead and Ground connected??

Negative on vacating Borgnet - they are still using their old talkgroup
for primary operations (confirmed today.) UHF is multicast, for tone-out
or interop with Westlake/West I-10.

From the April 24, 2012 Commissioners Court Agenda, recommendation
that award be made to:
Relm Wireless Corporation lowest offer in the amount of $1,498,983 for
469 P25 radios for the county.

25817. League City tower / thunderstorms

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-04-20 21:37:08 UTC
From: kevinmcoxphoto
Topic: 25817 Message: 25817

Looks like the weather may have done something to the League City TxWARN tower. Right after a huge thunderclap the CC dropped off for a minute or so.

It is back up now on 857.9875 but there is absolutely zero happening on it according to Unitrunker. No affiliations or anything.

The tower is back to normal now.

That is actually the whole content of the Info tab, I just cropped it in before uploading.

25835. RE: [HoustonScan] Re: MS150 feed

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-04-21 15:36:05 UTC
From: Myles Barkman
Topic: 25784 Message: 25835

I had to hook into the discone on the roof. Coming through the Houston Simulcast but not the Pearland site.

Picking up GCI 1 & 2.

444.300 sounds fine.

Great day for a bike ride sans the wind. At least it’s more of a crosswind than headwind.

From what I've read a lot of the problems with OpenSky systems is them being "under-designed" coverage-wise. It appears that Centerpoint (just like the CoH P25 system) won't have that problem. Now capacity-wise I see potential problems, only time will tell.

Opensky appears to use slots in a very flexible manner. Mix and match voice, data and control. The 25khz version supports four slots - that's up two four voice channels.

Capacity won't be a problem.

As Kevin points out, you may need more sites with Opensky. However, the two slot version of Opensky appears to support simulcast, allowing for a larger coverage area with the same frequencies. I don't know if that's two for four slot TDMA. At some point the mobile is too far away for timing tolerances to fit in the assigned slot.

LCRA is steadily ramping up Opensky deployment - 14+ sites across 10+ counties and growing. I take that to mean they are happy with the results.

Don't be surprised if Centerpoint turns off 003C and never looks back.

(Now if I could just figure out the VSELP bit packing ... Hah!)

What a mess.

Read that as "up to four" and "true for four slot" ...

25870. UHF is WIDE open

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-04-27 09:25:02 UTC
From: Rob
Topic: 25870 Message: 25870

I thought something had happened to my receiver at around 0400 local this morning, since there was something on practically every frequency in the UHF LMR range (450-470 MHz).

Then I realized: There really was something on practically every frequency. I'm in the Clear Lake area, and I had an S9 copy on (i.e., verify by call sign, frequency, CTCSS/DCS, and conversation subject matter) the Somervell County SO's and the Dallas PD's and Dallas Fire's UHF repeaters (all 250 miles NW of me), and a commercial repeater (WNDF994) near Baton Rouge, 250 miles east of me.

25871. "As of *now* . . ."

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-04-28 07:55:56 UTC
From: Rob
Topic: 25871 Message: 25871

Did anyone else catch this comment in the November 2011 City of Houston's RCS newsletter, The Frequency?:
=========="Everybody wants to know if wreckers and scanners will be able to hear ANY public safety communications on the 700 MHz Public Safety Radio System.
"As of now, the plan is to have the police dispatch/patrol channels, and fire's dispatch channels still available to the general public on the new system."=========
The "now" in "as of now" was italicized, suggestion that even this might change. I get the sense from the other messages on here that we've resigned ourselves to all but perhaps these few TGs being encrypted. Sadly, that will go a long way toward crippling both citizen involvement in emergency preparedness and government openness. We've had what I believe to be a strong and intelligent history in this nation of not throwing the baby out with the bath water when it comes to our response to a few bad apples; I wonder what happened to that mentality in the last 10 or 11 years ....

25872. 2 dell computers free for the asking

Hello:

I have two dell computers that are free to anyone who will use them.
Got them from my Dad.
Don't know much about them except they were working when pulled from service.
Both have windows xp home according to sticker on the computer.
1. Dell Dimension 4550, with keyboard, mouse and powercable.
1. Dell Dimension 2400, with keyboard, mouse and powercable.

If interested contact me directly.
I go up to the alvin, tx city, lamarque, dickenson area almost every day.
Can meet somewhere.
I live in Galveston.
Just hate to put them out on the side of the road to be hauled away.

Best regards
Leslie, ad5wb
Galveston Island, Texas

Ops (covers pretty much everything) for Constellation Field/Sugarland Skeeters is on 461.500 S PL 91.5. Traffic may calm down after the fun of a new team wears off, but it was almost non-stop while I was there. It's all handhelds (1w?) so you pretty much have to be on-site to hear anything.

25882. Harris County Bailiffs Getting New Radios

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-05-02 01:54:19 UTC
From: Eric C. Carlson
Topic: 25882 Message: 25882

Sheriff Adrian Garcia says before, his officers' two-way radios didn't work in the building, due to the way it was built. That wasn't a big issue because they also didn't have the money to buy radios for bailiffs. ...
All that is changing thanks to money that's been confiscated from drug dealers. The money is paying for new radio equipment and a repeater system that's being put into the building to allow the radios to work.

25883. CBP Air channels

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-05-02 03:11:19 UTC
From: Eric C. Carlson
Topic: 25883 Message: 25883

Some recent evidence suggests that the local CBP air branch may have recently started using the following frequencies which have not previously been reported in use in this area to my knowledge. These are simplex channels that have been reportedly used elsewhere in the country.
168.8375 293 NAC Air 1
168.9625 293 NAC Air 2
169.2625 293 NAC Air 3
169.1625 293 NAC Air 4
169.3875 293 NAC Air 5
Please report back if you hear any activity on these.

25888. CoH-TxWARN merger

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-05-04 04:01:07 UTC
From: Eric C. Carlson
Topic: 25888 Message: 25888

The CoH sites are now advertising as 1A7. 3AF was short lived. Also the Alvin site (3-11) is up on 771.00625.

-Eric

Which means it should be Phase 2 TDMA now as opposed to X2. If we look
at the IDEN_UP message we can determine this.

So does this mean that "traditional" TxWARN users (e.g. Brazoria County) will be able to roam onto the "new" RFSS 3 sites or will these new sites be limited to only City of Houston users?

In theory yes, but Brazoria County is still analog.

I know, I used Brazoria Co. as an example since I saw all their TGs listed on the P25 system. I just meant "any user who has always been on TxWARN (and eventually migrates to P25)" vs. "new CoH users."

So in the long run this new CoH towers will help expand coverage for everyone on the system then right?

I'm curious why they added, for example, a new tower (Site 3/014) in Brazoria instead of increasing frequencies/capacity on the existing tower (Site 1/008).

I would suspect that, in the beginning anyway, it will be run as 2 separate systems.

Someone needs to start working on cracking their encryption. It's probably only ADP which, according to a story I read, can be cracked in a couple of hours with software that's on the internet.

In the current configuration, I think it is likely that we will only see CoH users on the RFSS 3 sites. "Partitioning" users of trunked systems in this way with overlapping sites has been done in other areas of the country. In the long term, who knows how this system will evolve.

LWIN and the New Orleans region come to mind here. Seems kind of silly for LSP to need their own site when there are two simulcast layers covering the metro area but that's how they wanted to do it.

800 side is still broadcasting 3D8.. this is probably going to be the "Interim" system. No patch testing between it and HFD yet, but they may do a "light switch" changeover with no patching.

Topic: 25888 Message: 25921

Brazoria County built a new tower in order to own their own tower on their property rather than rent space on someone else's tower and be subject to the whims of a private owner.

Also to give better coverage. There were some dead spots at the south end of the county.

Being located at their Pct 1 headquarters, they have more control over access. Security is always an issue.

Grant money is available for security related equipment.

Charles Crook

That audio clip they played sure sounded like a bad case of Saber microphonics.

Looks like the APX mobiles are out in force. Surprised the handhelds haven't followed suit.

25979. CBP/Civil Air Patrol exercise

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-05-15 03:33:46 UTC
From: Eric C. Carlson
Topic: 25979 Message: 25979

There was some activity on 141.575 [127.3] CAP Command 1 today that indicated there was an air intercept exercise happening with CBP ("Omaha") aircraft. They mentioned Bay City and heading to LBX (Angleton/Lake Jackson). There was also some activity on CBP frequencies 136.375 and 350.025 but I can't confirm it was related. On 136.375 they were trying to confirm some numbers, unsure what for: "pretty sure that's incorrect if you can ask them to double check the 1283.3 for me in the sheet" and "38.3 I think it's backwards."

From: Kevin Chessher
Topic: 25988 Message: 25993

If you use software it should have a"Rebanding" check box to apply the tables. If you don't use software set the tables as below...

ChLo ChHi Base Offset Step
440 559 851.0250 440 25
0 719 851.0125 0 25

I don't have a Pro-96 in front of me, but to set these is in the programming somewhere. An owners manual should tell you.

You could download Win96, it has a 30-day full version free trial. Just change what you need and mess with getting ARC working later??? Just a thought.

From: Kevin Chessher
Topic: 25988 Message: 26000

When I get home I can dig out my 96 and walk through the steps...but you'll probably have it figured out by then.

And since you never applied the rabanding tables, I'm positive this is your problem.

Kevin,

You can't set the extended tables on the radio, you have to use software.

Lou

I'm afraid Mr. Lou is correct. You can set a bank to "multi-table" in
the radio but you can't access the tables from the radio.

Looks like it's software or nothing.

Well, probably in support of needing more sites, I noticed yesterday they are adding antennas and equipment to the tower they just finished on Katy/Ft Bend Rd.

My guess is that there are more sites going up around the area, this one just happens to be on a road I travel occasionally.

More Info can be found here:

The telltale sign is 3 white fiberglass antennas side-mounted on a tower
one above the other, usually close to an existing substation or other
installation. One other new purpose-built site is off of Old Galveston
near the NASA Bypass in Webster.

OpenSky's need for over-saturated coverage is well-documented.

I purchased a 60ft Rohn 25G tower in NW Houston last year. Have not had time to go get it. Now my tower guy tells me he cannot take it down (too busy). SO I am offering it here.

60ft Rohn25G w/ Cushcraft A3 yagi and rotor. Tower is standing and must be taken down (all cables included in price).

$400 for all.

Please contact direct if interested.

Chris

26027. CAP ELT training

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-05-19 15:48:59 UTC
From: Eric C. Carlson
Topic: 26027 Message: 26027

There is Civil Air Patrol ELT training going on this morning.
141.0 [131.8] Command 2 - most activity
141.575 [127.3] Command 1
They made reference to the ELT operating on 121.775. I also heard an aircraft calling Mission Base on 143.7 which is the input to the 148.15 repeater.

-Eric

There was a ground unit trying to call base on 148.15 [100.0]
(possibly simplex). It doesn't appear that he was successful.

From: Lou
Topic: 26054 Message: 26054

I caught some of this. Apparently someone in a vehicle didn't respond to a deputy and then brandished a weapon. This resulted in shots fired and now I think the suspect is down. EMS is heading in at this time. FM 529 blocked at Fry Rd. and also at near where Grand Parkway is crossing 529.

Activity on HCSO Disp 4 and scene activity is on HCSO SW Tac and also HCSO Tac 4.

Lou

Like I had said earlier, Lou was correct that you can't set the
multi-tables from the radio. I don't have software for the 96 so I can't
help you much there, but it shouldn't be too difficult to figure out.

Ok, I downloaded Arc96 and made a quick file with the Baytown site and
Baytown PD/FD. This should be a good starting place.

On 5/23/2012 7:41 PM, Kevin Chessher wrote:

Date: 2012-05-24 20:11:01 UTC
From: m_dav@sbcglobal.net
Topic: 26059 Message: 26059

Have been hearing the Zebra units (motorcycle units) testing from different locations today. Sounds like a hit or miss when inside Dawson High School.

And not defending the system, but it was never designed for in-building coverage.

I didn't know that. I wonder if the fire department knows that.

One more note. I did hear the Zebra unit go OD on the digital radio and dispatch couldn't hear him the first time because he was garbled. He was in the PD parking lot.

26065. New control channel?

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-05-26 02:03:37 UTC
From: kayi4cle
Topic: 26065 Message: 26065

Recently (in the last week) I am hearing what sounds like a typical control channel motorboating noise on 464.875. I tried putting this one frequency in as a Motorola UHF system, but no talkgroups appear, even though I'm getting strong reception (5 bars). Does anyone have info on what type of system, etc. Thanks . . .

A few businesses use it -- River Oaks and the Aquarium come to mind. But there hasn't been the control channel noise before.

At least I haven't heard TRBO on that freq from my area before. Maybe it's there and the transmission got stronger in the last week so that I am now hearing it? Also, just as recently, I don't hear River Oaks anymore. The plot thickens . . .

I'm pretty sure this is River Oaks Patrol. The license was modified for
TRBO in March and they appear to have cut-over in the last couple of weeks.

26075. CAP ELT training

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-05-26 15:04:02 UTC
From: ~Bill
Topic: 26027 Message: 26075

back from a week in Nashville, so playing catch up with messages.

In the original two versions of the CAP Code plug, there was NO Simplex on the Repeater outputs, however

due to technical issues with the Repeater running PL, P25 and DPL they chose to remove the DPL Option known as

Common Access Tone [CAT] which would trip any/all repeaters on the pair. I had not heard anymore yet on if this got

approved for simplex use.

Odd tho, as 100.0 was the OLD Common Access tone [Pre-Narrowband]

Bill Dunn N1KUG

Subject: [HoustonScan] Re: CAP ELT training

There was a ground unit trying to call base on 148.15 [100.0] (possibly simplex). It doesn't appear that he was successful.

From: kayi4cle
Topic: 26065 Message: 26076

And now I'm pretty sure you're right, as I forced myself to listen to the noise for several minutes just now. It has what I think must be the TRBO pattern of the noise being on for a lot longer than the short breaks without the noise. I didn't time it, but it's kind of like 15 or 20 seconds on and 3 or 4 seconds off. I observed this same kind of thing with another of the local businesses that has TRBO (can't remember which one). I think I was able to hear some traffic on that one, but it wasn't worth it. I haven't heard any traffic on this new TRBO modified channel.

I don't think so because I tried monitoring it with a digital radio and it is definitely analog. If I choose P25 only, or if a tone is inserted, I hear nothing; but without a tone it is loud and clear control channel noise.

The "noise" is consistent with conventional TRBO as heard on other
frequencies. The biggest giveaway for me is the "end of transmission" buzz.

I don't think I've heard TRBO there myself but the big user I get is the Pershing Middle School repeater with DCS 631. Also Rice U. shuttle buses with CTCSS 162.2. I haven't heard anything from the Aquarium (yet anyway).

I got another possible Bryan Mound SPR frequency from ducting
conditions on the morning of 5/22. I had traffic on 170.2125 DCS 532
(appears to be a repeater output):
reset out here
yes it's the ramp I can dump it manually just to check the head ok
did you copy what I said
give us a couple minutes
let me know when everyone is clear I'll set it off manually and write it up
coming at you

The site truly is sending out these channel grants, it used to do it on BCSO Dispatch 1 which REALLY hosed up the subscribers. The Mo City site did it on Mo City PD1 last year and again really hosed up the subscribers. I "believe" it's a SmartX defect, but I have no proof.

Speaking of this, I hooked-up my TV to my "Sputnik" with surprising results. I did a search and found 96 "channels", a lot are color bars or a language I don't understand but surprising to me none the less.

Also, in my opinion, OTA HD picture quality is better than cable.

Speaking of OTA HD TV. Channel 3 KBTX is in HD on OTA only and in SD on Direct TV. This is the only local station not in HD on Direct TV. When I lived in Fresno I watched all local channels with rabbet ears and got excellent HD. picture. The same is true hear in Caldwell.

I'll have to look back through this thread to see what "Sputnik" antenna you're referring to. You're getting more channels than I am. About 77 channels are coming in with my RadioShack "Indoor HDTV Antenna." I agree, the OTA picture is superb (compared to Comcast, in my case). I have one small TV hooked up OTA, and the picture is so clear I keep threatening to ditch cable TV altogether. With my Magnavox DVR, I can time shift my favs either way with good results (good enough for me, at least).

It sounds like they are declaring an emergency and are advising they're underweight for landing. The issue may just be the communications problems. It's not clear. They are advising they'll stay on 121.5 and are headed for C-23 north side. Now clear to land 27.

File this for future reference as it appears to be Platinum Event
Services security and the radios are separate from the Summer Fest
show radios: 451.8 [233.6]

The frequencies for the show radios line up with the Monarch license
again but it seems that they do not have a standard frequency plan for
the rental radios because the tones are different this year.

26142. Re: TV antenna

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-06-04 21:03:47 UTC
From: Christopher W. Boone
Topic: 22889 Message: 26142

For those trying to pick up OTA DTV, remember the wonderful FCC based signal levels in digital on a 30ft high OUTSIDE antenna. So trying to pick up inside is a tough one already...

Also do NOT place your antenna on top of your HDTV....why?? A HDTV is a computer....and as such, radiates noise over a broad range like a desktop does..so an antenna there wont be the optimum choice....place your antenna as far as possible from the TV...and preferably use an outside antenna.

Most rabbit ears suck as they don't have uniform pattern or gain across the channels...one antenna does though... http://www.digitenna.com/
Saw It at a DTV seminar in Dallas in October. It's not cheap (about $50+) but it DOES work...

Also there are NO OTA signals on RF2-RF6 in Houston currently, though a Low power digital 4 (a LD4 as they are classified by the FCC) is trying to move into the Baytown area from the east...it was licensed on the former Clear Channel Devers 2000ft tower (ATC now owns that stick as CC has NO stations on it)....but it was never on the air from that tower..so I wouldn't sweat an antenna that covers 2-6....There are smaller antennas that cover 7-69 (though the TV band now stops at 51 officially) Wineguard is one of those who makes them. Also you can find more at www.solidsignal.com

If you need more info or help, check the Houston forum on AVSForum.com

Where is Caldwell located, as there are no listed repeaters on 443.475 in the Houston area, but there is one listed in Dallas in the ARRL Repeater Directory dated 2007/2008

The Dallas repeater is listed as owned by K5TIT & is listed as a "closed" repeater with limited access..

The repeater should have an auto ID, either verbal or in CW every 10 minutes..

For a repeater listing in your area, check the closest ARC listed at the ARRL web site, most clubs have a comprehensive listing of repeaters in their area, which may include club operated or sponsored repeaters..

Could be Caldwell County or that small town west of College Station.

I heard 443.475 PL 103.5 tonight a link with 146.8 with PL of 85.4.. Caldwell is 22 miles from Bryan and 82
miles from Austin on US HWY 21 and HWY 36 in Burleson County.. Dallas is to far from here for it to be the one you described. I pick it up using a mobile dual band Larson antenna. Traffic on it now..

Just like there are several coordinating groups available to commercial licenses, there can be more than one coordinating group for amateur radio repeaters.

I was told about this Texas Repeater Council that coordinates some repeaters but they don't have an online database for you to search.

I can't even find a website for them now but did find this for them:

http://www.corporationwiki.com/Texas/Dallas/texas-repeater-council-inc/37633034.aspx

Here are links about the Allstar Link system:

https://allstarlink.org/index.html

https://allstarlink.org/nodelist.php

I heard 443.475 PL 103.5 tonight a link with 146.8 with PL of 85.4.. Caldwell is 22 miles from Bryan and 82

miles from Austin on US HWY 21 and HWY 36 in Burleson County.. Dallas is to far from here for it to be the one you described. I pick it up using a mobile dual band Larson antenna. Traffic on it now..

Subject: [HoustonScan] Re: 443.475Mhz

Where is Caldwell located, as there are no listed repeaters on 443.475 in the Houston area, but there is one listed in Dallas in the ARRL Repeater Directory dated 2007/2008

The Dallas repeater is listed as owned by K5TIT & is listed as a "closed" repeater with limited access..

The repeater should have an auto ID, either verbal or in CW every 10 minutes..

For a repeater listing in your area, check the closest ARC listed at the ARRL web site, most clubs have a comprehensive listing of repeaters in their area, which may include club operated or sponsored repeaters..

Actually no...a rptr should NOT beacon ID unless it is monitored by a control op...rptrs follow the same rules as normal station...it must ID once every 10 mins while in use...(the old rules said a rptr would ID on first keyup and then once 10mins during use; with no requirement of a clean up ID...they combined rptrs into normal stations when they rewrote the rules in "Plain English" in 1994)
A lot of rptrs controllers still ID at the first keyup but legally, they don't have to....(Personally I wish they would put the old rptr ID rules back in)

Sounds like Life Flight is having some comm issues. Through the Pearland site, dispatch keeps calling LF 6 and 6 answers but dispatch can’t hear them.

Sometimes, dispatch sounds distorted like they are off frequency.

So what’s the deal with this fancy system that costs so much and has all these problems? I know, for the most part it works fine, but no one remembers the times it works fine.

For those of you with a PSR-800 you might want to check out TG 44980 (X-2 TDMA) on 3D8, it's the same as 453.425. Sounds pretty good...except for the tones.

Sounds like the robot on A1 is getting the analog-digital-analog
treatment. No new talkgroups popping up on either system.
So far the "ringing phone" tone sounds like a crying baby and the hi-lo
tone sounds like a whipped dog.

Audio on 453.425 went back to normal for a while, then back to digitized. The talkgroup grants on 3D8 never skipped a beat. Interesting to note that on the 700 side a non-TDMA scanner will follow the talkgroup with no audio but not on the 800 system.

44981 will probably be another HFD talkgroup; heard that one a few weeks ago in clear Phase 1 with console audio tests.

"Interesting to note that on the 700 side a non-TDMA scanner will follow the talkgroup with no audio but not on the 800 system."

My guess would be that is due to 3D8 being X-2 which is a manufacturer specific IDEN_UP and the scanner has no idea what to do with it at all, as opposed to 1A7 which is Phase 2 which follows the P25 spec IDEN_UP-wise but the scanner can't do TDMA.

Thing is, the 700 side was doing that before the 1A7 merge. Also the TGID will pop up on 3D8 while you're parked on the control channel, it just won't track.

On a side note, I got to play with the new GRE mobile scanner (a PSR900?) and the PSR800 at HamCom in Plano last weekend. The GRE rep on hand wasn't optimistic about future Phase II support, and IIRC the mobile wouldn't even support X2. Neither one seemed to handle Phase 1 simulcast any better than any of the other current offerings either. He did mention that licensing TRBO would cost a cool $100,000 though.

My employer wants to monitor HCSO (all districts), Constable Pct 4 and 5, Ft Bend, Nrazoria Co SO and PD's, Pasadena, Baytown and surrounding agencies. They are located near Bissonnet and Buffalo Speedway. Using an outside antenna, we're only picking up one tower (Med Center) and that's only getting us one HCSO Talkgroup, 9008. Any advice would be greatly appreciated!

Subject: [HoustonScan] Help needed!!

My employer wants to monitor HCSO (all districts), Constable Pct 4 and 5, Ft Bend, Nrazoria Co SO and PD's, Pasadena, Baytown and surrounding agencies. They are located near Bissonnet and Buffalo Speedway. Using an outside antenna, we're only picking up one tower (Med Center) and that's only getting us one HCSO Talkgroup, 9008. Any advice would be greatly appreciated!

Before everything was Rebanded there were some talkgroups that were not available on the med center tower. I don't know how it is set up now though.

What type of radios? What type of antennas? We need a lot more information. Mizwa asked me about this several months ago but I haven't heard from him since then.

The noise floor at 700/800 MHz in that pert of the world is terrible. Tell your employer he needs to find a quieter monitoring location - serious suggestion.

If you have to work from that part of town, to monitor all of the agencies you just named you'd need Yagis up at about 40-50 feet (rough guess, would need to see the actual area) pointed at specific towers and fed through bandpass filters to knock out all of the cellular interference. Coax type is an important factor as well.. if your total cable run is more than 50 feet you'd need to step up to LMR600 cable.

Pasadena public safety is migrating to the new Houston city system, probably before the end of the year, and may not be monitorable after that. AFAIK everyone else in that part of the world is sticking with 2318 for the foreseeable future.

My guess would be site 52 or 53. I don't think the city would be happy if they were bootlegging on their system.

That's actually a very good idea, it won't help them with Baytown, Pasadena or other stuff on the east side, but it should work quite well. I bet they have a "partner" out east that could do the same. With so much channel reuse and strong adjacent frequency interference it's impossible to monitor a system this large from a single location.

Sounds like business as usual on the old public works system. Not
hearing any digitized patch audio on HFD A1-8 either.
B1-8 med telemetry maybe?

That's actually a very good idea, it won't help them with Baytown, Pasadena or other stuff on the east side, but it should work quite well. I bet they have a "partner" out east that could do the same. With so much channel reuse and strong adjacent frequency interference it's impossible to monitor a system this large from a single location.

They have 3 Uniden 996 XT's. I tried my scanner in the parking lot and only got Med Ctr site. Would u suggest me setting up a remote scanner at my house and sending them the link? i can get at least 3 sites at my location.

Did today's storm knock Com 20 (460.2500, D114) off the air this afternoon? They've been using Com 22 (453.1625, D116) since mid-afternoon.

Also, does Station 4 have a HF base? There appears to be a long wire array behind the firehouse.

OR TG 91. Today they where testing/talking on Pld Fire Tac 2 and Radio Test 1. I think it may have been techs and or FD personnel. One of the voices new which site they where using and signal strength. There was some wonderment why the Alvin site and not the Mo City site (analog)was being used while near Hwy 6 & 288.

Also the Z units were back on Tac West. I didn't hear any TG 125 activity.

Something I need to do is listen to BCSO and see if they are having issues in the west part of Pearland. The analog sites are common to lots of radios from different agencies. I have watched on UT in the past and noticed BCSO is always on the Alvin site and the Pearland site. Do they have different radios between the two agencies ? Would that make a difference ?

I would imagine one major difference would be most other agencies won't be in-building.

The Pearland site "should" be a lot better now that they rectified their UL issue.

Going back. When Pearland first joined the 800 Mhz world, they had complaints of not being able to hear radios inside WalMart. There was just one WalMart back then. Eventually a Pearland site was added to compensate for Alvins, and probably Downtowns, lack of coverage. This latest issue started when the Z units developed problems. And I believe it was a problem that slowly developed. I understand in-building problems. But why a problem for a guy on motorcycle ? Equipment ? If changes were made recently to equipment, and looks like they were, things should be getting better.

Easy answer...portables on hip with speaker mics. Your body can be a 20 dB attenuator, add that to a site with a moderate UL issue and you have a major problem.

Agreed. One more thought. There are homes and businesses now where once there were rice fields, and some good dove hunting, five,10,or 15 years ago. Lots to keep pace with.

And as I've said before (and I'm not defending or putting it down) the system was not designed for in-building coverage or on-hip for that matter.

If you want in-building you need to open the checkbook, just ask Houston. In about the same area that HC has 13 sites Houston will have 35 or so.

Law enforcement radios will typically have the entire system worth of sites programed into their A zone, with B and up zones programmed to specific sites. Fire/EMS and local government user radios may vary.

The handheld coverage issue is why bids for new urban systems will almost always specify "portable worn on belt" in their coverage requirements.

26275. Poor WX frequency reception

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-06-24 01:55:11 UTC
From: kayi4cle
Topic: 26275 Message: 26275

I have 162.400 programmed in 3 WX radios, and am only getting static (even though this is the channel that has worked best at my location in the past). Searching the WX channels with my 346XT and testing it all over the house, the only WX channel I can get is 162.55, and it is too weak to be reliable.

What a bad time for not having WX reception! I wonder if the WX warning system is down or being worked on. Does anyone know if there is any hope for improvement before the storm hits? Thanks . . .

26276. Re: [HoustonScan] Poor WX frequency reception

Date: 2012-06-24 02:17:59 UTC
From: Kevin Chessher
Topic: 26275 Message: 26276

I had a question about the incorrect coverage map on the website after the transmitter move and emailed them and got a response from the head of the Houston office with several members of the engineering team copied on it. He was very polite and helpful. I'll dig that email up and forward the addresses to you if you want. No guarantees, but it's a place to start.

There was discussion a while back about the site being relocated, favoring the northwest.

I live in Baytown and now receive a strong signal only on 162.55.

I recall that they moved an antenna awhile back. But even after they did that, I finally was getting my usual channel at times, and it was stronger than others at my location.

Maybe the atmospheric conditions are affecting things today? I'll need to monitor the situation and see if there is improvement. I didn't know I wasn't receiving anything until I was moving one of my radios and tested it out. Then I noticed another one had the poor reception notice flashing on it. This must be recent, because I was getting the test alerts regularly. I couldn't be the only one living in a central location with a WX radio -- wonder if others are having issues too? I live just west of downtown.

Today I switched WX radios to WX Channel 7 (162.55) and am getting improved reception. Hopefully there will be enough signal during bad weather to receive warnings -- but am not anxious to test that out anytime soon!

SO 1/5 & Pct. 4 - N. Gessner & Tamina sites.
SO 2 - CJC/Downtown, Huffman, Humble sites
Pct. 5 - Clodine, maybe Med Center & N. Gessner sites
Remember also that all of the SO dispatch & tac talkgroups are on 1A7
and can be heard countywide on the simulcast.

Date: 2012-06-26 03:53:09 UTC
From: Myles Barkman
Topic: 26291 Message: 26294

The only freq licensed in Harris County between 155.765 and 155.785 is 155.775 in La Porte.

Use of freq licensed under KKS972 is "90.20 - GOVERNMENT ENTITY CHARGED WITH SPECIFIC FIRE PROTECTION ACTIVITIES. RADIO TO COORDINATE THESE ACTIVITIES".

TRBO is available on all of La Porte FD's channels, the old PD repeater 154.325 and EMS repeater 155.625.

There is also a TRBO repeater licensed on 156.240. This sounds like a bad choice of a freq given that the USCG VTS check-in channel for the ship channel is on 156.250 and La Porte sits on the ship channel. I don't care if TRBO is narrowband. The marine channel radios are not narrowband.

Inputs to 155.775 and 156.240 are 153.965 and 154.650.

I hear an idle TRBO signal on 155.775 roughly every 2 minutes.

Station 4 does indeed have an HF station, but not for the Fire Department per se.

The department was kind enough to allow the Katy Amateur Radio Society to set up an HF (and VHF/UHF) station in a small room and to set up the antenna array you mentioned. The station is open for use by licensed Katy Amateur Radio Society club members. It serves a dual purpose as a club station and as a link to other HF-equipped sites in Texas during times of emergency.

By the way, the club welcomes all licensed hams, whether living in Katy or not. See www.katyars.com for more details.

Regards,

Jim, K5UI

From: Eric C. Carlson
Topic: 26305 Message: 26305

It appears that we have a MOTOTRBO Connect Plus trunked system (this is the multi-site-capable TRBO trunked type). 490.3875 is the control channel. It is broadcasting as Network 119 and Site 1. Color Code is 1. I am seeing talkgroup activity. Group Address 90050 is in use. This talkgroup is pretty active for a Saturday evening. Source Addresses include 81233, 81149, 81102, 81170, 81200, 81079, 81018, 810006, 81124, 81061, 81005. I'm seeing grants for LCN 6 and LCN 7. LCN 4 is being reported as "the Rest channel." 490.2125 is a voice channel in this system. 490.7375 may also be a voice channel.

Heard a first a little bit ago: a UP PD unit came up on DPS B (155.4675) asking for a 28/29 check. They've been reported as heard on DPS channels in other parts of the state, but this is the first time I've heard one in Houston. Didn't catch the unit number but the "UPR" was pretty hard to miss. Did note that his RID was 1 like the consoles.. that might have confused a few people.

I'm getting a weak P25 repeater output on 165.2875 on an analog scanner tonight. It's too weak to decode P25 at my location in town. This may be another Net (other than the Net 2 which covers central Houston). If you're in an outlying area, check it out and report back. The input may be 166.5375 with a 65x NAC depending on which Net it is.

All evidence so far is that the Monarch rentals and MOSE UHF radios
are not being used this year. I'm seeing activity on a number of new
CoH trunked analog talkgroups and so far the channel designations seem
to align the Mayor's Office of Special Events radio channel plan.
Mostly just key-ups and radio checks so far. The first 2 channels are
the most active and have been busy all day.

41232 Ch. 1? Security (5 Star)
41264 Ch. 2? Operations
41296 Dispatch
41360
41392
41424
41456
41488
41520
41552
41584

Thank you for this info. I have plugged these in and heard some activity earlier this evening on the first couple talkgroups. In the past, Pyrotechnics (461.2625) was very interesting. You could tell just when the display was starting. I wish we knew where to find this year's version of that!

My guess is that it will be on one of the CoH talkgroups this year but
we'll just have to wait and see.

Also, coincidentally the 3D8 P25 system is down. They may be using more
frequencies on the analog system for extra load tomorrow.

There were IRS(?) units testing briefly on the 165.95 NAC 004 repeater today. I also had an IRS unit calling Charlie-100 on 165.2375 [100.0] having trouble with his radio not rekeying.

OK, it looked like there were 12 TG to match up to the 12 UHF channels. I was hoping they would have kept the same channel designations. What would be the challenge in that?!?

Topic: 26065 Message: 26327

River Oaks Patrol dispatch is on Group 1 and Slot 0 (Color Code 1). There
are also a lot of (non-voice) data transmissions going back and forth which
seems to account for why it's keyed-up so much.

-Eric

I caught some interesting traffic on 136.275 DEA "victor" today using
new terminology "snake base" that I haven't heard before.
"victor snake base from 14"
"snake base from 14 on victor, 17 you there"

-Eric

June;

Radio Shack's service center doesn't program customers' radios. Sorry.

The only software I know of for programming your PRO96 are Arc96 and Win96.

The TSA uses Icom F-50V radios with the inversion option. So far I have run into very few that are NOT using the inversion option on them.

I have noticed at IAH, Terminal C, almost no one from the TSA has a radio, either XTS or Icom...

Speaking of Metro PD, can anyone down there explain what the antenna placement on the attached pic is for? I of course get the transit antennas, but I am curious as to why the 800 antennas are so close to each other, and what the benefit is. Anyone know? Thanks.

26352. Flash Flood Warning

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-07-11 11:19:39 UTC
From: Rusty Caufield
Topic: 26352 Message: 26352

The National Weather Service in League City has issued a

* Flash Flood Warning for... eastern Washington County in southeast Texas... southern Grimes County in southeast Texas... extreme northwestern Harris County in southeast Texas... western Montgomery County in southeast Texas... extreme southeastern Brazos County in southeast Texas... northern Waller County in southeast Texas... extreme northeastern Austin County in southeast Texas...

* until 815 am CDT

* at 600 am CDT... Doppler radar indicated a nearly stationary area of thunderstorms across the warned area. Radar estimates 1 to 3 inches of rain has already fallen and an additional 1 to 3 inches is possible. Flash flooding is expected to begin shortly as additional rains runoff.

* Some locations that may experience flooding include... Hempstead... Prairie View... Pinehurst... Waller... Magnolia... Pine Island... Montgomery... Stagecoach and Todd Mission.

Precautionary/preparedness actions...

Do not drive your vehicle into areas where the water covers the roadway. The water depth may be too great to allow your car to cross safely. Move to higher ground.

Had heard more on 2115 recently but not enough to determine what was going on.

If this is Lone Star College, it sure doesn't fall in line with League City's TGs.

Neither of Lone Star's P25 TG have popped up yet (685 and 1443).

Are they still active on analog 11024?

I see they have 6 campuses:

CyFair

Kingwood

Montgomery (The Woodlands)

North Harris

Tomball

University Park (newest)

On a related topic, Highlands VFD started using 154.295 for paging a
couple of months ago. Don't know the tone.

Really? They're going to use a National Interop channel for paging! Ugh when while they learn!

In addition, they may potentially use a variety of other frequencies, such as Marine Ch. 22A or other marine frequencies, 345.0 or other mil air frequencies and HF. 165.3125 and 413.025 are usually encrypted. Coast Guard Auxiliary aircraft are regularly heard on 22A in the Houston area.

26401. RE: [HoustonScan] coast guard question

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-07-26 03:27:38 UTC
From: Myles Barkman
Topic: 579 Message: 26401
Attachments: 2 described; binary payloads are missing from this source WARC

In the Houston area, I typically pick them up on Ch.21A, 157.050 for working incidents.

I don't keep 22A, 157.100 in scan because of regular broadcasts, but it could be used since it is the channel the Coast Guard uses to communicate with the public.

156.800 may be used as well but I don't keep that in scan because it is used by the public as a calling channel so gets more chatter than I would like.

In addition, they may potentially use a variety of other frequencies, such as Marine Ch. 22A or other marine frequencies, 345.0 or other mil air frequencies and HF. 165.3125 and 413.025 are usually encrypted. Coast Guard Auxiliary aircraft are regularly heard on 22A in the Houston area.

At the bottom of each email is a link named "Visit your group".

Clicking that link opens the group page in your browser. You may have to login for this to work. There's a search bar that will let you search past messages. Very useful.

26417. Centerpoint Energy Radio System Update

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-07-29 20:06:56 UTC
From: Aaron Siller
Topic: 26417 Message: 26417

Hello all

I have updated this in the Radioreference forums already so I figured I would update ya'll here. Harris Corp. has begun installing new radios in distrabution dispatch snd RTO here at ECDC over the past week, that being said it will not be long before the old system goes silent. Once they start handing out radios to security here at ECDC and the patrol supervisors i suspect that the switch will happen sooner, if I had to guess by the end of the summer or the end of the year at the latest. According to Harris Corp. they are ahead of schedule for this so I'm leaning more to the sooner side.

We have some moderate ducting to the west this afternoon. I'm getting the
164.625 [107.2] repeater again.

I probably misheard this but they were reporting their current
location to dispatch as "Dawson Bayou." They referenced "Weather
Station Road" and reported thunderstorms to the north and east. More
significantly though they're talking about a "burnout operation"
involving 300-400 acres (dispatch was asking about the current size).

Judging by all the new entries on RR, the traffic is picking up on this system.

Base is "Anahuac Dispatch" so I'm assuming this is Anahuac National
Wildlife Refuge or maybe a consolidated channel for the NWRs in that
area.

I also heard "Engine 2621" advising a 1 hour ETA to "McFaddin shop" so
this may be related to the McFaddin NWR.

26475. 168.5

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-08-09 02:43:03 UTC
From: Eric C. Carlson
Topic: 26475 Message: 26475

I heard some traffic on 168.5 this evening, analog simplex, only one side heard weakly near downtown. It sounded like the guy was talking about vehicles like it was some truck-to-truck talk. It appeared to be CSQ. Tonight is my first hit on this frequency.

Topic: 26443 Message: 26478

Ah, yes, the good old days: 154.950/155.370, 453.550, and 37.180.
Plus, HPD's 460.225.

Today, most (county) LE radios have the Mutual Aid Channels, and on a special bank, the primary dispatch tg for many agencies. Interestingly, the users were probably never issued the "cheat sheet" that shows what and where is programmed the various tgs on both the car and handheld radios, instructions on how to change "channels"; or were issued them and then "filed" them away in a "safe" place for future reference; or, were told they could only use certain channels on the primary bank (Zone 1). I suspect all 3 of the above are true.

Is the CC still up?

I thought the EMS supervisor/AMA requests might have moved since new A5
was active and old UHF A5 had been quiet, but they just popped up on
there today. Got a few more weeks, I s'pose.

I believe the MTX has a SMA connector.

26491. RE: [HoustonScan] wanted UHF antenna for Motorola MTX

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-08-11 02:46:22 UTC
From: jhilde_@msn.com
Topic: 26380 Message: 26491

You know, I considered chiming in regarding the Kawa recommendation, but didn't want to seemingly blast someone's recommendation. But, since someone else broke the ice, lol, I agree Kawa antennas are junk. However, I have bought numerous other items from Kawa over the years with success. I just avoid buying antennas from them due to bad experiences with them.

I too would go with Tessco if you don't want to pay OEM top dollar. Laird makes a decent non-OEM portable antenna. I can get those at roughly half off the list price from Tessco. Not sure if that goes for anyone who has an account, or mine is at some sort of special level or not. If you are interested, you might want to try to create an account and see if the price goes down.
Good luck.

Topic: 26420 Message: 26505

So both of Houston's SmartNet II systems are now gone (2221 and 2A28). These were 2 of the first SmartNet II systems in the country.

From: WILLIAM D.
Topic: 26506 Message: 26509

Someone said the starnet system was all but gone but I still heard pct 4 on it today from the baytown tower.
I take it that it is still around and will be for some time just with other users on it.
I dont think that CMOC has moved unless someone knows more.

The "Public Health" zone channels were some of the first to be "Smart-X'd" between 4.1 Analog & 7x Digital P25 systems, including the CMOC TG's.

4.1 is the older analog system (2318) and 7x is the new P25 system (1A7). Smart-X is the cross connect between the two systems that allows users to talk back and forth between the two. Smart-X is enabled on a per TG basis.

26515. RE: [HoustonScan] starnet system

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-08-16 22:09:30 UTC
From: Myles Barkman
Topic: 26506 Message: 26515

Smart-X is good for 2 things:

When transitioning an agency from the analog system to the digital system so everyone can still talk to each other while folks get moved little by little.

For interoperability on certain talk groups where one agency using digital (HCSO or some HC Constables) can communicate with agencies still using the analog system.

Question:

Are the digital radios also capable of and programmed for the old analog system as a backup?

Yes they are capable, not only as a backup but for those primary channels that are still analog.

Yeah, it'll be years (if ever) before Motorola fields a digital-only
public safety radio.

On a related topic, the city of Pasadena has started handing out APX
radios. Word on the street is the old tower next to the old police
station won't be long for the world once the new tower goes hot and the
city switches over.
